E A R L Y D A Y S WITH TED
THAYER OF FEED FILTER AI

2094 sats \ 30k boost \ 4 comments \ @Car 22 Sep builders
zaps forwarded to @tedthizzy (50%) @PlebLab (50%)

Early release of Early Days for the ~builders territory (drops worldwide at noon tomorrow) had a fun conversation with Ted of Feed Filter AI who is working on Making Social Media Great Again! We recorded this about 2 months ago.

E A R L Y D A Y S with @tedthizzy of Feed Filter AI

Summary

In this episode of Early Days, Car sits down with Ted from Feed Filter AI to explore using AI as a tool to enhance user

experience on social media by filtering out unwanted content. They discuss the role of Feed Filter AI in content curation, the challenges of social media today, and the importance of understanding user needs in early-stage products. Ted shares hard lessons from earlier startups, the importance of shipping with live user feedback, and why he's building Feed Filter AI as a company for the Bitcoin era, where privacy, ownership, and open networks matter.

We explore

- How to Make Social Media Great Again!
- Where does the moat live? User-owned rules, privacy, compounding models
- What to measure? Junk removed, time saved, retention
- User-controlled filters that run across X and Instagram
- Cutting social noise so users get their attention back

STACKER NEWS IS

I SIGNED UP FOR
FLIGHT SCHOOL

4493 sats \ 43 comments \ @ek 22 Sep mostly_harmless

Cessna 152, a model purposely designed for training

wow
much
impress

I signed up for flight school last week. I chose to go with FFH Aviation Training. The three weeks of ground school will start right after lightning++ on October 6, 2025.

Now, you might ask: why pay this school almost €20k and not choose another one?

That's a good question, and one I also asked myself for a long time. In fact, I had five years to think about it, because I already considered signing up with them back then. I didn't seriously consider it at the time, though, because I knew I wouldn't be able to afford it. I just wanted to get a quote and find out whether there was anything that would keep my dream of flying from ever even taking off.

So, I took the test for the certificate of airworthiness, and fortunately, I passed. I only remember that the assistant had to tell me to breathe in even deeper, and for a moment I got scared that I'd fail because I couldn't breathe deep enough, haha. But no, everything was fine. After that, it was only a question of money.

So, what did I do in those five years? Other than buying bitcoin, not much, to be honest.

CONTINUED

I did not look into any other schools. I looked up common red flags, but most of them already required some commitment to the school to spot. Only price (it shouldn't be too cheap) and genuine reviews seemed like something I could use as inputs for my decision. Since reviews can be faked—and the bad flight schools will make sure they have good reviews—I also couldn't really trust them. I tried to find reviews of FFH on Reddit but couldn't find any. I took this as a good sign.

Together with how professional they seemed to be with multiple locations in Germany—there was even a location in California before the pandemic—, their focus on training airline pilots and info material in fancy folders—that got less fancy over the years though, haha—, I felt comfortable trusting my decision.

However, it was important to me that I wouldn't have to pay everything at once, so I made sure that wasn't the case. And as expected, yes, I only had to pay for ground school upfront in a non-refundable way. For the lessons in the air, I would be billed separately.

This also meant I could start my training with them and later still decide if I wanted to join another school. I was pleasantly surprised when the Head of Education pointed this out himself during the application in person. I was in no way obligated to finish my training with them.

Another good sign was that it was important to him that I knew what I was getting into. When he said that they usually don't let people sign up without going to one of their info events first, I told him that I had been to two over the last five years. This question also came up multiple times during our conversations on the phone while I was getting closer to actually signing up in person. So it looked like he was a little forgetful, but I didn't mind. The important thing is that he cares.

At some point, in addition to all of the above, I considered it mostly a waste of time to look into other schools. In the end, I just need to get along with the instructors and be able to trust their knowledge. And before I get to know them, there aren't many ways to find out. So I would consider myself to have done enough due diligence to make sure I don't get the worst flight school. Maybe also not the best, but I'm confident it will be good enough.

Everything I will need for my training

I might also post a full breakdown of the costs soon.

I have also already prepared a joke to say before takeoff when I take friends with me:

Are you ready to go to heaven?

DISCUSSION

Excellent! I took lessons forty years ago but never got my license. I ran out of money. I still loved every minute of it. There is something both exciting and relaxing about practicing touch and go landings at a quiet airport. I flew a Piper Cherokee Warrior. My instructor was Norwegian and two years younger than me. He quit the flight school to become an Alaskan bush pilot. He sent me a few postcards.

62 sats \ 1 reply \ [@astro_penguin](#) 22 Sep

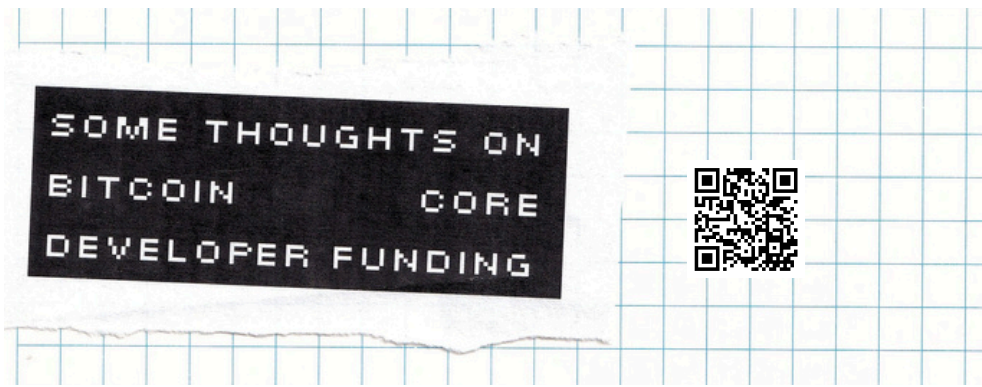

Congratulations! I hope you enjoy it! I've wanted to since I was probably 5 or 6, but I've pretty much given up on it due to the cost. A few years ago I set aside the money to do an introductory course without planning to continue, just so I could say I did it. It was a huge amount of fun, and I have a number of hours in my logbook and a lot of pictures and memories from it!

↳ 0 sats \ 0 replies \ [@ek](#) OP 22 Sep

Flying was my first idea as a career!

Not fixed-wing though, but helicopter. For some reason I thought flying a helicopter is way cooler because you can land basically anywhere. I wanted to specifically become a rescue helicopter pilot. But yeah, the money you need is a big hurdle. I think helicopter training is even more expensive than fixed-wing.

I didn't pursue it further because the only way to make it happen without any money was to join the armed forces first and hope I would be able to go down the officer path and learn how to fly. But I didn't because I would have to commit to the armed forces for years before I actually knew if I would be trained as a pilot.

Happy to answer any questions

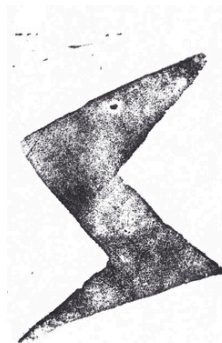

Id estimate Bitcoin Core developer funding is similar to what 1A1z outlined in last years report

(<https://s3.amazonaws.com/1a1z.com/files/1A1z%20-%20Funding%20Bitcoin%20-%20Part%201.pdf>)

Since then, 2140 and localhost research have come online which is good for decentralization.

There are good new Bitcoin Core developer candidates coming out of Chaincode's BOSS program who I think are worthy of funding.

At Brink we just had Marco finish his year long fuzz testing fellowship in London and he has moved to full time (<https://brink.dev/blog/2025/07/31/marco-fuzzing-fellowship/>) and will be announcing 2 fuzz testing interns shortly.

< i'd suspect there are too many contributors

I don't think the situation is dire by any means, but 30-40 full time engineers focusing on maintaining and hardening mission critical software for a \$2.5T network doesnt feel like too many to me.

< funding has overshot

See above.

But also, grants/salaries are still quite below industry salaries, although better than years past. Additional monies can provide funding organizations runway which helps attract new engineers. New orgs are good for decentralization and also need funding. We also want to make sure new contributors get involved (think: bus factor, turnover, etc). There are initiatives that dont involve engineer salaries as well (compute power, software/services, etc)

If anything the room for improvement is more diverse funding sources (good for decentralization and perception of "influence" issues) and donations/pledges that are longer term (low time preference).

< funding for a purpose

Funding for specific deliverables is hard in open source and probably harder in Bitcoin and even harder in Bitcoin Core. That said, I do think many funding orgs do have focus areas. Brink for example is security, testing, review, and maintenance work. Others have focus areas as well. Donors can choose what kinds of initiatives/purposes they want to support.

I published my perspective on Bitcoin governance:

<https://pretyflaco.github.io/bitcoingovernance/>

Where does Bitcoin derive its censorship-resistance from? And how do we preserve it?

Sharing some frameworks I've found helpful 🙌

The main insight: Bitcoin's unique value comes from censorship-resistance, and the two magic ingredients to achieve it are:

- ✅ Free users
- ✅ Free software

- > Censorship-resistance requires free users
- > Free users require free software

Traditional governance asks "who decides?"

These systems are easy to co-opt and can therefore never preserve censorship-resistance.

Bitcoin governance asks "how do we preserve free users?", and this is they key to preserving censorship-resistance.

For developers, this means:

- > Optimize for user agency
- > Default to user choice over "optimal" outcomes

Remember: we're building infrastructure for freedom.

These are just my current thoughts – governance philosophy evolves with experience – but it's clear to me that censorship-resistance is a derivative of free users.

There is a leap of faith required in bitcoin's governance model.

We must trust that when users are given genuine freedom and access to good information, they will make choices that preserve what makes bitcoin valuable.

Users who want bitcoin to remain censorship-resistant will choose software and rules that maintain that property.

Users who prefer other properties may make different choices, but the network's evolution will reflect the aggregate of all these individual decisions.

When we take the leap and trust that free users will make the right choices, Bitcoin succeeds.

I would love to hear perspectives from builders, users, and researchers working on or thinking about these problems.

The biggest issue today is that users aren't choosing, the number of users who trust themselves to "choose" are few, most are deferential to people they perceive as knowing more than them. This is natural, its an instinct that makes the division of labor innate.

This human nature though leaves a vulnerability that's exploited time and again throughout history, symbols of authority, institutions, will be usurped.

This is Bitcoin Core today, where salaried developers anointed by an opaque cabal of NGO's have created a political battlefield over the default behaviors of the many, having only been able to do so based upon a legacy they themselves had no hand in building.

Whether you're an ossifist or an expressionist, this symbol of authority works against your interests and shouldn't be acceptable to you. Archiving Core is one thing every Bitcoiner should agree upon.

What keeps you awake at night?

765 sats \ 42 comments \ @Aardvark 25 Sep AskSN

Global conflict? AI? The economy?

Or is it something closer to home?

Personally, I've become more of a doomer on AI.

I don't think it's going to be good for humanity.

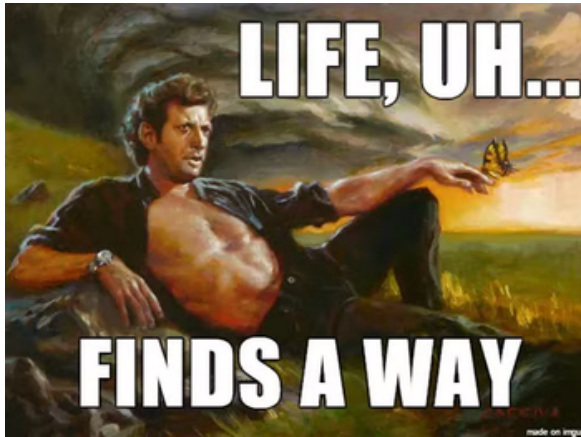

116 sats \ 9 replies \ @Undisciplined 25 Sep

What keeps me awake is usually being kicked by either the dog or the kid.

↳ 42 sats \ 1 reply \ @Bitcoiner1 26 Sep

Sorry for the question, but how do you manage to have sex on that crowded bed???

↳ 80 sats \ 0 replies \ @Undisciplined 26 Sep

42 sats \ 1 reply \ @kepford 25 Sep

Caffeine.

Life is too short to worry about things outside of your sphere of influence. The only things I lose sleep over are within my sphere of control and influence and its rare. My faith is the biggest reason I sleep well but really it's pointless to worry.

42 sats \ 1 reply \ @SimpleStacker 25 Sep

"just one more turn"

↳ 30 sats \ 0 replies \ @Aardvark OP 23h
That's so real.

42 sats \ 3 replies \ @grayruby 25 Sep

Health of family troubles me on occasion but for the most part I usually sleep fairly well.

If I can't sleep it is usually because I crashed on the couch watching something late at night and woke up realizing I hadn't taken my dog out for her last pee and by the time I do that I am wide awake for the next few hours.

That's when you will find me on SN at 4am.

42 sats \ 0 replies \ @035736735e 25 Sep

Honestly, what keeps me awake at night isn't just AI or the economy...it's the thought that we might forget our humanity in the rush towards the future...

I've always believed art is a mirror it reflects who we are, but also who we could become. Every time a world-changing force appears (AI included), we're given two brushes one that can paint beauty, empathy, and connection... and one that can paint fear, division, and loss. The danger is not the brush itself, but the hand that wields it...

26 sats \ 0 replies \ @Kontext 26 Sep

The things I've left undone, the things I haven't done properly, the things I've failed at – and keep failing at. But also, often I find myself wondering whether I'm even doing the right things to begin with, whether the path I'm walking on is my path or not. The question it all usually boils down to is **how to serve the world to the best of one's abilities?**

And unfortunately, I don't have a great answer for that other than fuck around and find out (and each person has a different answer).
