Stacker News Zine is a weekly publication made in Austin, TX by @plebpoet with help from @k00b and @ek.

tubes, constantly given antibiotics to fight life-threatening infections, a 60 pound living skeleton. But she is alive."

While the removal of the respirator did not end the ordeal for Joseph and Julia Quinlan, who still visit their daughter daily, it appears to have had a profound effect upon public opinion and the law regarding the care of the terminally ill....

After "Human Kindness," a Lesson in Human Understanding

At least 125,000 people packed the Washington Monument grounds on a warm Saturday in May for a Human Kindness Day rock concert. The day's casualty list included: 211 robberies, a shooting, and other events, and 100 arrests. The concert, which began at 11 a.m. and ended at 10 p.m., was a celebration of the life-threatening infections that the removal of the respirator did not end the ordeal for Joseph and Julia Quinlan, who still visit their daughter daily. It appears to have had a profound effect upon public opinion and the law regarding the care of the terminally ill....

NOTE FROM THE EDITOR

My note is often the very last touch I add to the project. It requires me to zoom out and think in a different way, a challenging gear-shift when the bulk of the work is done in the details. When I start to grasp the bigger picture, I feel only gratitude that this project exists. I'm thankful for you.

I hope you enjoy looking at this.

Agnew the paramount event was when he stood erect, unless before Judge Hoffman his "no contest" plea on charge.

idea, which the judge declared "full equivalent of a plea" was the result of days of jockeying between Agnew's law justice Department officials for the plea and his resignation.

government agreed not to prosecute Agnew for alleged acts of bribery stretching over period and involving at least one woman.

The charges were spelled out in a Justice Department report of evidence....

For context:

Welp stackers we are about 30 days out from the start of The Atlanta Bitcoin Conference #7 (TABCONF #7) at Georgia Tech!

I went to TABCONF #6 and had a blast so this year I decided to host an SN event and hopefully make this a yearly event along side this conference till my death!

My idea was accepted on GitHub

So far we have floor space (which I hope comes with a table) and pod equipment provided by @Car.

I don't have anything planned at the moment but here is what I plan to bring.

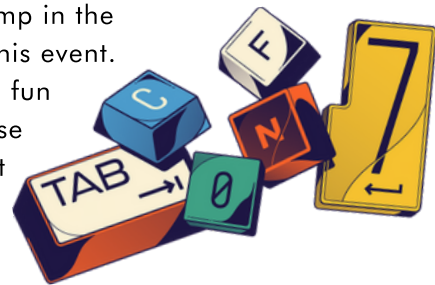

- Merch from @AGORA
- All the zines from @plebpoet
- I ordered some blank satscards (yes from that NVK who hates on SN) to help stackers give out sats if they so wish. If not I plan on thinking of something cool like drawing SN designs and giving them away

I have some other ideas like making some business cards that link to Stacker News and to my territories but I haven't pulled the trigger on that yet.

But stackers feel free to jump in the comments and help plan this event.

The overall goal is to have fun celebrating SN and increase awareness about this great site we all cherish!

Hope to see you all in Atlanta!

Since we have quite a few US-based stackers, I thought I would ask. Now, of course, it depends on city, habits, and all sorts of things, but I noticed that, in my brain, I have an almost immediate association of 'not safe' when it comes to the US. Maybe it's the endless news about school shootings, random acts of violence, liberal-enabled homeless drug ghettos. Bit like how now when I think of London I think of the very expensive tube and stabbings. Is this just an attention bias thing? I mean I don't actually watch the news, but obvs whatever does filter through, tends to be the worst shit. Like, if you have kids, do you worry about school shootings, or is it kind of not on the radar? When I lived in Moscow in the mid-2000s, people back home would ask if it was dangerous etc, and I never had any trouble, despite always being out all night in the bars and things on weekends, traveling different places. But a lot of that is down to good situational awareness.

218 sats \ 47 replies \ [@didiplaywell](#) 13 Sep
Trust me, you are safe in the US. God forbid you ever get the Argentinean experience of living in fear every single day. The fear of not knowing if you're going to make it back home from work, or if you are even going to find your home as you left it. Getting back to a fully empty house is normal. And hoppeles: you will never recover what's stolen. Stealing is practically legal. Trying to get your stuff back is practically illegal, and god forbid you find the one who did it, because you're going to have to move to another city, which is the norm, and what the police itself will kindly advise you to do.

I'm not exaggerating in the least. When Iran started to bomb Israel some months ago, hundreds of videos went viral here of Argentinians who emigrated to Israel who where calming down their relatives saying that they felt pretty secure and actually feared more for their relatives back in Argentina. ...

I've been in LA for 13 years. In those years we've been burglarized once, a homeless person spit into the ear of my daughter once, I was in a restaurant when someone threw a brick through the window ...

GNILMA'S

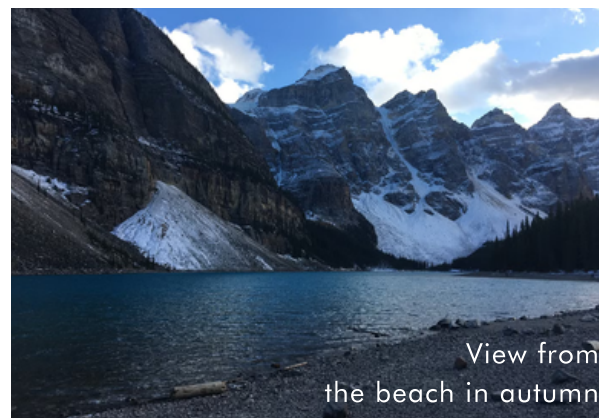

HIKING ADVENTURES 90 –

MORaine LAKE

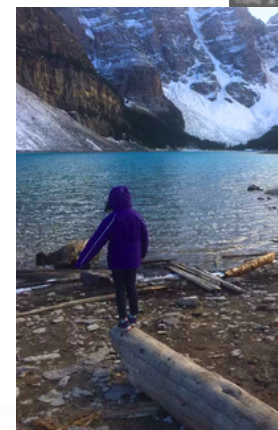

890 sats \ 7 comments \ [@gnilma](#) 14 Sep alter_native

This week we head to Moraine Lake. There are hiking trails around the lake, but through the two times we visited the lake, we never really went hiking around the lake. The first time we went was back in October 2017, when it was still possible for private vehicles to drive to the lake's parking lot. Since it was during autumn during our visit, there was quite a bit of snow on the mountains behind the lake. We also arrived at the lake quite late in the day, so we had limited daylight remaining for the day and only chill for a little bit at the lake beach before heading back. Fun fact, Moraine Lake was the scene on the back of the Canadian \$20 bill for their Scenes of Canada Series, which was in circulation between 1969-1979.

We visited the lake again in early September 2021, during which the lake's parking lot was no longer accessible to private vehicles. In order to access the lake, you either had to hike down or take a shuttle bus / tour bus with a permit. There were much less snow on the mountains on our second visit because we were visiting the lake near the end of summer. We also had more time during our second visit, so we walked up a stairwell to a higher vantage point where we could observe the lake from above. When we were done at the higher vantage point, we went down to the beach to let the kids play in the water before taking the shuttle bus back to the overflow parking lot.

This post is an attempt to do a little informal market research regarding stackers' willingness and desire to start using bitcoin for day to day expenses. I have been lurking around the ~AGORA territory and nostr to get an idea of what products can be bought with sats.

My impressions are that at this early stage most sellers are offering either bitcoin related

merch or specialty items, both of which understandably are priced higher than what a family might be willing or able to spend for necessities. Examples include Zeus t-shirts, Pubkey hoodies, high quality beef, specialty coffees, ghee, tallow soaps and deodorant, etc.

I wonder if stackers would want to buy basic necessities (think toilet paper, generic coffee, paper towels) by mail at prices at or below what you would expect to pay with fiat?

People will not start spending their sats on daily necessities until they will start earning them (not buying/DCA).

Only then will see the true value of each sat and how they should spend it.

Since I joined stacker.news in May, my mindset about money and debt has been changing. I began to see with new eyes what financial freedom really means and how credit can be a silent trap if you don't control it.

"my mindset about money and debt has been changing"

For a long time, I was dividing expenses across several cards, believing it was the way to "get organized." In reality, what I was doing was compromising my future and sinking deeper into debt. The chart I'm keeping is clear: in June, I reached a peak of R\$5,611.15 in debt, an enormous burden that robbed me of peace. (My mother-in-law was also here at home, and we bought more things for her to take to Cuba.)

But from then on, I decided to make a radical change. I stopped using multiple cards and kept only one that gives cashback in SATs. It's a prepaid card, which means that to use it, I have to load money onto it first. This forces me to pay everything in cash, without financing. It may seem limiting, but it's actually been liberating: if there's no balance, you don't buy, period. And every SAT I accumulate is a reminder that I'm now building, not destroying.

~ continued ~

To speed up the process of getting out of debt, I also started generating extra income. On weekends when I can, I accompany a member of my church to sell melons, and that extra money has helped me pay off my debt faster. At the same time, at home, we cut down on unnecessary expenses and learned to live more simply.

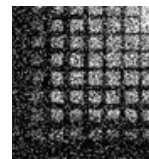

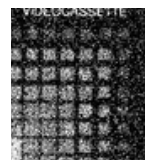

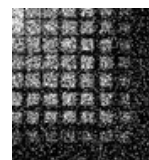

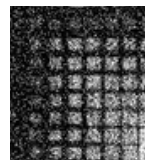

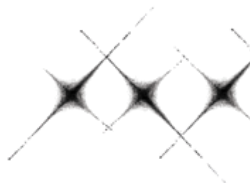

What's interesting about the table is how the change in mindset began to be reflected in the numbers.

For example,

what appears as September's payment actually corresponds to the end of August: there's already a significant drop, going from over R\$2,900 in April and almost R\$5,600 in June, to R\$1,941 in July and R\$852 in August/September. And by the end of December, the debts will be, God willing, just R\$291.

It hasn't been easy, but with each passing month, I see the fruits of my hard work. Visiting stacker.news here helped me look at things from a different perspective: to stop seeing credit as easy money and start thinking in terms of sovereignty and discipline.

Today, I'm still in the process, but with one certainty: every debt I pay off is a step toward freedom, and every SAT I accumulate is a building block in the future I'm building.

After a long hiatus, I'm back with another academic article review. Shout out to @scoresby for sourcing the article (#1216945). I'm always interested in reading academic articles related to Bitcoin, but don't usually have the time to go looking them up since it's not technically my field of study.

Also, I used to put these posts in ~BooksAndArticles because I wanted the exposure from @siggy47's newsletters, but I think I'll put them in ~econ from now on since it's the more natural fit. (When crossposting?)

Anyway, today we'll be taking a look at Hedging Sanctions Risk: Cryptocurrency in Central Bank Reserves, by Matthew Ferranti who works at the University of Cincinnati Cryptoeconomics Lab. The paper was published in 2025 in the Journal of International Money and Finance.

Overview

This paper seeks to address the question of whether central banks should hold cryptocurrency as a hedge against sanctions risk. It is purely a simulation based paper, meaning it builds a model of various assets and simulates outcomes under different central bank portfolio choices. Sanctions are modeled as a purely exogenous shock that devalues the central bank's holdings of particular assets. For example, US sanctions are modeled as resulting in the total loss of US treasury holdings and a 2/3 loss in the valuation of global stock valuations. EU sanctions are modeled as resulting in the loss of Euro denominated holdings and a 1/3 loss in global stock valuation. Gold and cryptocurrency (which the paper simply calls Bitcoin) are modeled as unsanctionable.

The main result of the paper is shown in the figure below. This shows the optimal portfolio allocation to Bitcoin at various degrees of risk aversion and sanctions risk. The red line shows the optimal Bitcoin allocation of a country with a very high risk of sanctions, whereas the dotted gray line shows the optimal Bitcoin allocation of a country with no risk of sanctions. The horizontal axis measures the degree of risk aversion. The result suggests that countries with low-risk aversion should in general hold some Bitcoin, regardless of their sanctions risk.

Countries with high risk-aversion with low risks of sanctions should not any Bitcoin, but countries with high-risk aversion and high sanctions risk should hold around 10-20% of their portfolio in Bitcoin.

...

Critiques of the paper

If I had to critique the paper, it would be a general critique of all simulation based papers. To trust the results you really have to trust the model, and the model is greatly simplified. For example, Ferranti assumes that sanctions risk is independent of the central bank's choice of portfolio holdings. But in reality, the US may threaten sanctions against countries that try to de-dollarize. Another questionable assumption is the absolute uncensorability of Bitcoin. We agree that Bitcoin is censorship resistant, but there at the nation-state level there are many actions that the US or other world powers could take to make transacting with Bitcoin difficult for a small country.

Thus, I find the results fascinating and in-line with my understanding of Bitcoin's role as a censorship-resistant monetary network; but I question the real world applicability of the simulation results.

...

Takeaways for Bitcoiners

To me, the main takeaway is that you can present your friends with "academic proof" that Bitcoin is useful as a censorship resistant asset, even though the "proof" is somewhat suspect since it's based on simulations only. (The simulation is only as good as the model and the assumptions that go into it.) Still, it's better to have some corroborating evidence than no evidence, right? The other takeaway are the interesting charts showing the relationship between gold reserves and military imports, and the share of bitcoin mining by country. These are useful data points to have in your back pocket as you talk about Bitcoin in various capacities.
