Austin BitDevs: Underground - July Edition - THURSDAY, July 16 at 6PM!

2166 sats \ 10 comments \ **@Scoresby** 14 Jul bitcoin bitdevs

Austin Bitdevs Underground is back for another exciting edition! If you're in Austin this Thursday, July 16, come on by the BTC++ house to talk about what's new in Bitcoin!

 Thursday, 16 July 2026

 6:00PM - 8:00PM Texas time!

 BTC++ House in Austin (sign up for address)

Here's the current list of topics:

Releases

- Bitcoin Core 31.1
- Bey Wallet v0.2.0 #1523738
- Radar Chat #1521273
- satd v0.4.0 #1521112
- Trustless wallet #1520296
- ColdCard v5.5.1 #1519306
- Terminal - BTCPay Server
- root_wallet - j-kon
- Bitcoin Safe v2.0 #1516805
- PlebTV v3.0 #1516210
- Wasabi Wallet v2.8.0 ...
- Hal Wallet #1515075
- Bedrock, ...
- Ashigaru v1.0 #1513477
- Zappi Wallet #1512921

BIPs

- BIP Draft: Full-Aggregation of BIP 340 Signatures - fjahr #1522638
- BIP Draft: Bitcoin infinity - expiring transactions #1517328
- BIP Draft: Segregated Data - a burnable, script-isolated block region for data #1513617

and much more

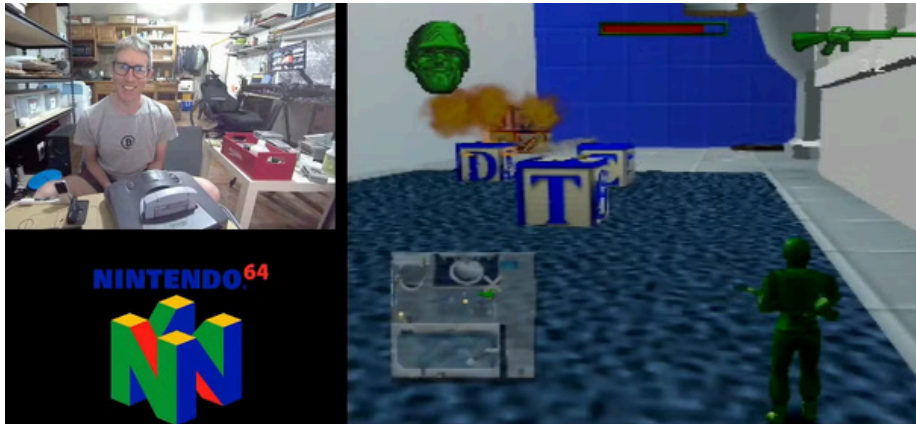

I got into N64 Retro Gaming and I'm loving it

5546 sats \ 9 comments \ [@grimtechnet](#) 12 Jul gaming

N64 has kind of resurfaced in pop culture and I've jumped on the bandwagon, taking the opportunity to jump back in and play some classics, while sharing my experience on youtube.

Part of it is nostalgia. I had so many fun times playing Mario Kart, Diddy Kong Racing, LEGO Racers and various Star Wars games with my siblings. I played Turok, Perfect Dark, 007, and other violent games at my friend's houses who had more permissive parents!

I definitely miss those days, but I know I can't go back. Time for new memories on an old console, then! I've been enjoying playing Super Mario 64 with my 5 year old niece. She loves to play as Mario on the easy parts, but she'll usually pass me the controller to get her through the hard parts. I always do it with a smile!

Part of it is FOMO. N64 has nearly 400 games and I only played probably 50! I love games, I love that era, and there are so many of those experiences that I want for myself.

Part of it is stress reduction. I've been pursuing entrepreneurship for 6-7 years and I've been coping with workaholism and burnout. Picking up gaming has brought excitement, joy, and moderation back into my life.

Part of it is to show myself that I can progress towards my goals. "Organizations are fractals" is something I think about a lot. In a company, the CEO's habits and policies trickle down and influence every worker. In my own life, beating a difficult game is a small-scale version of finishing a major project. In other words, if I don't give up on the small scale, it makes it easier to be persistent with the big scale.

Part of it is rewarding myself. I recently resumed landscaping and it's so satisfying to work hard, clean up, then wind down by playing an hour or three of Army Men Sarge's Heroes.

Games can be found cheap at garage sales, or flea markets. For finding something specific, eBay is the best. Reproduction games can be found on aliexpress for less, and they often work better than old worn out authentic carts.

I dove down the physical cart rabbit hole. I learned how to identify authentic vs. reproduction. I watched dozens of youtube videos about how to clean and refurbish old cartridges. It's a hobby and a discipline in itself, requiring patience, commitment, and storage space. I went all in, buying cotton swabs, Goo Gone, Isopropyl alcohol, and specialty screwdriver bits. Along the way, I increased my confidence in my ability to move slow and repair things. If it was '95, I could totally work as a Nintendo repair technician!

So far, I've beat Army Men Sarge's Heroes, and Battletanx. Army Men was a huge struggle, one I wanted to give up so many times. Several levels were so gruelingly difficult and a few took me 5+ hours to beat. There are 16 levels, each with their own frustrating challenges. I never want to play that game again!

ScamouraiWallet/POST_MORTEM.md

- nopara73

16.1k sats \ 7 comments \ @Scoresby 12 Jul bitcoin

I never really got involved in the Samourai vs Wasabi disagreement. I've used both coinjoin implementations and feel like they were both pretty good tools. In that light, I found this post mortem by nopara (who is the originator of Wasabi Wallet, I believe) and, whichever side you come down on, it is an interesting read.

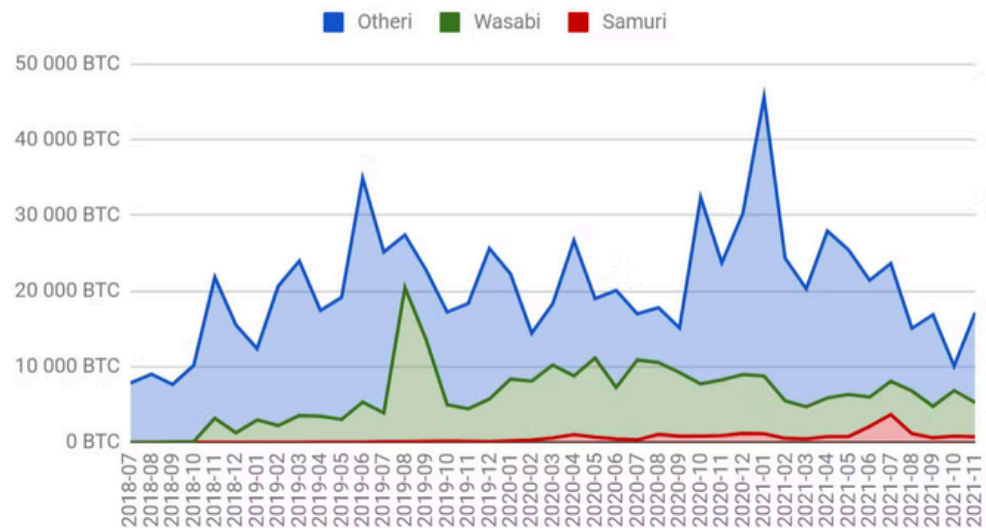

I didn't know about some of this history here. For instance, nopara says:

- I created ZeroLink. The repository makes the chronology clear. I opened it on July 28, 2017. Before Samourai made a single commit, I had made 19 and written a 184-line, 2,883-word document containing the framework's core architecture.

The article is not what I'd call an unbiased assessment, but at the same time nopara raises some good points. On the case of Samourai's mixing volume:

- Samourai's Twitter presence made the rivalry look symmetrical despite the large difference in usage. Dumplings—my reproducible CoinJoin scanner—separated fresh bitcoin entering a mixer from coins merely being remixed and called fresh bitcoin the best on-chain proxy for adoption. From Whirlpool's first detected month in April 2019 through the dataset's end in August 2022, it identified 247,675 fresh BTC entering Wasabi and 30,228 entering Whirlpool. Wasabi led in every one of those forty-one months. This is a measure of bitcoin, not a user headcount, but it is the opposite of adoption parity.

Fresh Bitcoins CoinJoined

All in all, it's worth the read if you want to try to get a better understanding of the Wasabi vs Samourai yelling match. I'd be curious to hear a pushback from the Samourai side.

comments

203 sats \ 0 replies \ @lontivero 13 Jul

Wasabi has always been much larger than Samourai. Anyone can verify this directly from blockchain data.

This paper <https://crysp.petsymposium.org/popets/2026/popets-2026-0061.pdf> shows that (see Table 3):

L All coinjoins statistics

Coinjoin pool (coordinator name)	Operating period (from - to)	Total cjtxs (#)	Fresh inputs (#/value)	Remix rate (average)	Unmoved UTXOs (#, value)	Num. of inputs (min/avg/max)
Wasabi 1.x (zkSNACKs)	2018-07-19 - 2023-05-19	33594	336k / 227231.2 B	72.8%	2.5%, 3456.0 B	6 / 74.3 / 186
Wasabi 2.x (zkSNACKs)	2022-06-18 - 2024-06-02	35170	273k / 70007.3 B	94.6%	4.4%, 4880.6 B	50* / 214.9 / 400
Wasabi 2.x (post-zkSNACKs)	2024-05-02 - running	42717	135k / 46958.3 B	87.6%	11.5%, 3501.0 B	<15 / 96.7 / 498
Wasabi 2.x (kruw.io)	2024-05-07 - running	13952	123k / 46309.7 B	87.5%	11.1%, 3388.3 B	<15 / 227.5 / 498
Wasabi 2.x (opencord.)	2024-07-06 - running	14295	6524 / 257.9 B	89.3%	14.2%, 21.2 B	<15 / 32.5 / 100
Wasabi 2.x (gingerwallet)	2024-06-02 - running	11971	2467 / 187.4 B	95.1%	14.4%, 60.1 B	<15 / 33.6 / 81
Wasabi 2.x (wasabicoord.)	2024-06-09 - 2024-08-12	1187	1523 / 135.3 B	87.3%	3.0%, 7.3 B	<15 / 35.1 / 102
Wasabi 2.x (unknown_2024_e85631)	2024-05-02 - 2024-11-11	653	260 / 37.9 B	82.9%	14.0%, 19.9 B	<15 / 42.6 / 87

...

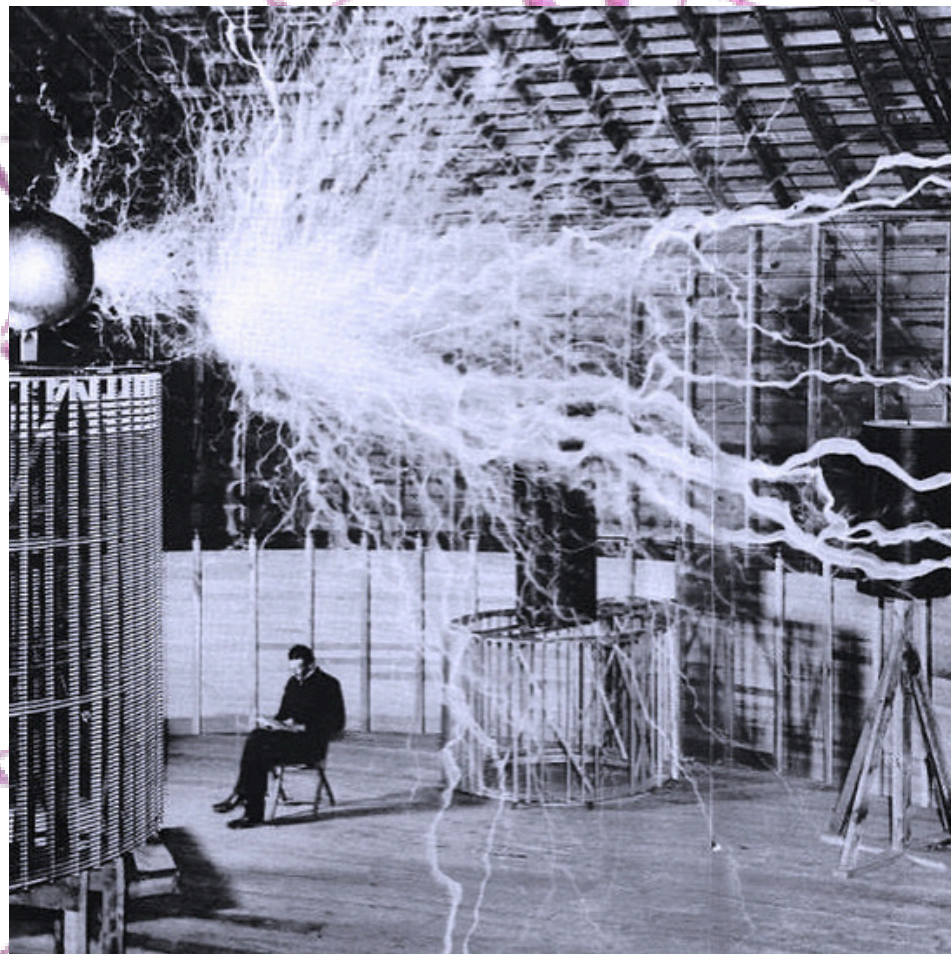

If we use the number of fresh inputs as a proxy for popularity, you can see that during the zkSNACKs period, Wasabi usage outperformed Samourai by a wide margin. Wasabi's fresh inputs totaled 297,238.5 BTC, while Samourai's were only 47,309 BTC.

Kruw's coordinator processed, in less than two years, more than Samourai did in its entire history. By November 2025—after 18 months of operation—Kruw's coordinator had already reached 46,309 BTC in fresh inputs.

A especial town

1583 sats \ 3 comments \

@Malos_10 14 Jul Photography

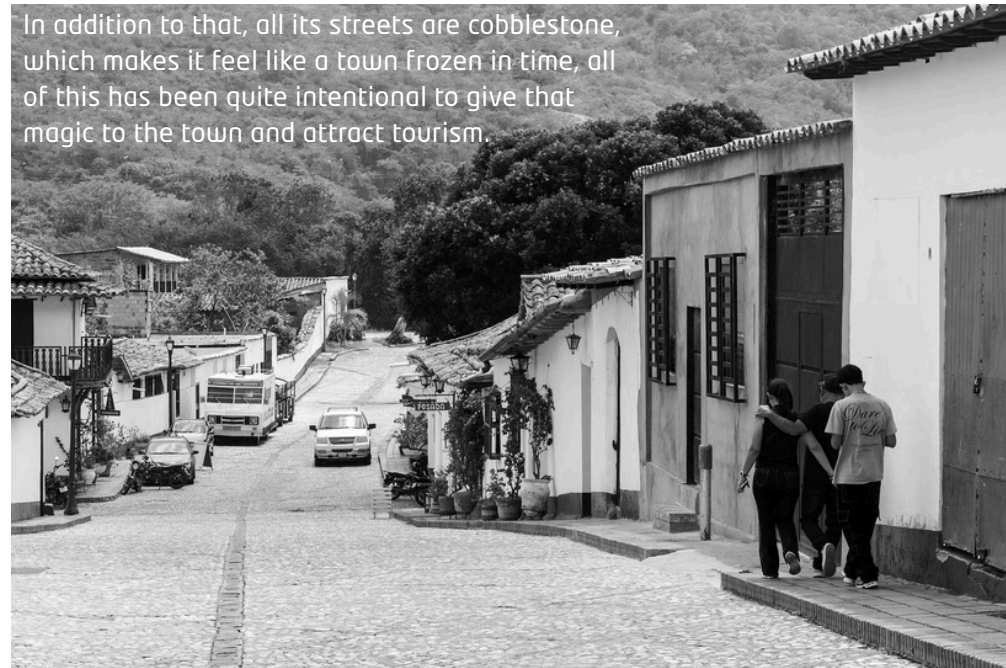

Greetings to all my friends in this beautiful community, today I want to share with you a set of photographs that I took some time ago and hadn't shared with you yet.

All these photos are from a very special town called San Pedro del Rio, located in the state of Tachira, Venezuela, 1 hour away from where I live.

What makes it special is that this town by law preserves its colonial facades, new houses cannot be built with other styles of facades:

In addition to that, all its streets are cobblestone, which makes it feel like a town frozen in time, all of this has been quite intentional to give that magic to the town and attract tourism.

And if you look closely, you won't be able to see electric cables in any of the streets because all the electrical wiring is underground, and literally this is the only town or city in Venezuela that I know of that has had such a level of organization to ensure that its locality looks as beautiful and aesthetic as possible.

Thanks to the combination of all those things, it has become a beautiful little town where in every corner you find magical landscapes worthy of photographing!

All the photos were taken with my Canon R8 camera, a 24-105mm lens and only natural light. I hope you liked these photos as much as I did and thanks for watching!

Venezuela post earthquake

2177 sats \ 10 comments \ @bief57

15 Jul Politics_And_Law

The first week was marked by collective mourning, with absolutely no one leaving their homes except for markets and pharmacies. Many people mobilized to the hardest hit areas to help in any way they could. The outpouring of aid from civilians was so overwhelming that the government closed the border to La Guaira and began requiring safe passage for entry, placing every possible obstacle in the way of assistance. It was a complete disaster and utter chaos, with people who had good intentions but zero knowledge of organization and logistics, and an absent government whose only aim was to further complicate the situation.

This tragedy brought out the best and worst in everyone. Many have given what little they have to help, from money and medicine to clothing, and others have taken advantage of the good faith of others to steal under the guise of receiving donations. Personally, I prefer to help an affected person or family directly rather than give supplies or money without knowing if they will actually follow through on their promises. The aid has been massive, both inside and outside of Venezuela. I feel deep disgust for those who have stolen the donated money.

There has been a lot of misinformation, conspiracy theories, and scammers. Aid has decreased; fewer people are donating, and many people have left the disaster zone, as the roads are no longer blocked or closed.

These are the official figures so far, but we know that in a catastrophe the real numbers are never published:

- Deaths: 4,734 people have been reported dead following the ongoing debris removal.
- Rescued: Emergency crews have rescued 6,462 people alive.
- Injured: The official number of injured remains stable at 16,740.
- Homeless: A total of 17,907 people have lost their homes due to structural damage.

The worst affected area is worse than it appears or can be described. The putrid smell of thousands of dead bodies, the countless flies and maggots, the garbage pollution, the corpses dumped anywhere, some covered with bags or sheets, others exposed. The scenes of hundreds of buildings reduced to rubble, after having been such beautiful places, the muffled cries of those who lost everything. There are no words to describe it.

Listening to the stories of those who survived is horrifying; you have to be inhuman not to feel any pain from their words. There's a collective sense of guilt among those of us who are doing well; it's as if feeling good is disrespectful to others. It's a complicated feeling feeling grateful but also guilty at the same time.

They created pages to register missing persons or to register people who have been found. <https://venezuelareporta.org/en>

- 41,295 missing / 33,139 in hospitals, shelters, or already found

This is a summary of the military's involvement:

Rifles and no tools. They approach, take photos, and leave. They sit sheltered in the shade, threatening and blackmailing those who approach with donations. They are the worst parasites.

We owe a debt of gratitude to all the people who have been helping in the landslide zones, risking their lives, venturing into crevices and unstable terrain, enduring hunger, thirst, sleepless nights, and the sun all day long in places where the temperature ranges from 28°C to 30°C. They have suffered heatstroke, broken hands, and some have even lost fingernails and other injuries. These are people who, without any family or acquaintances, have been there, dedicating their lives to helping others without asking for anything in return. From my perspective, they are true angels on earth.

My deepest condolences to those who lost loved ones, and may the thousands of lives lost rest in peace. There are no words that can offer comfort.

My Visit To BitdevsNYC

3279 sats \ 11 comments \ [@siggy47](#) 17 Jul bitcoin

Even though I am a New Yorker who first discovered bitcoin almost a decade ago, I have remained ignorant of the bitdev concept until very recently. From what I assumed these organizations were exclusively for developers, and any meetings open to the public would be highly technical and way over my head. Then, I was bored one day when I was in the Tampa Bay area, so I decided to attend a bitdev meetup. I posted about that experience: [#1511345](#)

I had such a good time that I figured I would check out the New York bitdev community when I returned home.

The birth of bitdev

BitdevsNYC was founded by Jay Beddict in 2013. It was originally housed in the Bitcoin Center NYC in lower Manhattan's financial district, across from the New York Stock Exchange. The meetups focused on code, protocol mechanics, and cryptography. No price speculation or altcoin discussion. From the start, Jay adopted a "socratic seminar" format, which ideally serves as a guided group debate.

At some point the meetings were moved to the offices of Chaincode Labs, at 450 Lexington avenue, 38th floor. Chaincode maintains bitcoin core (check out my sticker), the BIPs system, and Bitcoin Optech.

My Big Night

This is where last night's seminar was held. I happened to pick a hot, humid summer afternoon to visit. The long train ride was unusual, since the NYC skyline was almost completely obscured by the heavy smoke from Canadian wildfires.

Allow me a minor complaint about the process of getting on the list to attend the seminar. First of all, I recognize this is a first class operation. They feed you, provide liquid refreshment, and you get to listen to world class bitcoin devs. It still struck me as annoying that I had to register through meetup.com. You had to log in with an email address, password, deal with 100 different captcha photos (if you're spastic like me), and be told you need to bring photo ID to get in. I'm aware that the photo ID is probably an office building requirement, but still. Couldn't we at least be able to log in with lightning? They certainly respect the network, as I learned during the seminar.

Anyway, that's the end of my whining. I recommend to anyone who gets the opportunity to attend a NYC bitdev seminar. I avoided it for years because I was intimidated. Everyone involved was welcoming. I figured I would have been the oldest guy in the room, but there were plenty of graybeards. Even bitcoin beginners were made to feel comfortable, while at the same time the discussion was cordial, well run, and very instructive. I felt like I was back in school in a class I was actually interested in, with good teachers. I'm not going to mention names or affiliations of anyone who presented or attended, as I agreed to maintain the privacy of individuals as a condition of attendance. I think that is fair.

Even though this was a Chaincode extravaganza, the Core/Knots discussion was kept to a minimum. More time was spent on Paul Sztorc's drive chain hard fork. Then we learned about the Spark/Ark controversy. I didn't even know they were fighting. Everyone was encouraged to speak, so I made some stupid comment about the fact that neither were decentralized. No one threw stuff at me and told me to shut up. Next, there was mention of the first stratum v2 block being mined by a company named DMND.

This is a big deal. However, then a discussion ensued as to how much better this company is for miner decentralization than Ocean. As some of you know, I mine with Ocean. It's not political for me. When I started mining with them running knots was an option, not a political statement. So, everyone started saying how wonderful DMND was, and how Alejandro De La Torre was very concerned with mining centralization and wanted to change things. I started googling the company to think about switching. I discovered that they are full KYC. This was addressed. Alejandro didn't want to scare off big businesses by not being fully compliant. One of the reasons I like Ocean is there is no KYC. Then, I discovered that the DMND pool only supports on chain payouts. Strike two for me, since I'm a little pleb miner. Third, you get paid in rBTC, which is a shitcoin in my book. So, I quietly decided to stop listening and stick with crazy Luke.

The second part of the meeting was a deep dive into trampoline lightning payments. I feel like I learned a lot about onion routing. The presentation was very good. The point was to explain how the technology could be used for mobile phone routing, although the presenter acknowledged that there were still problems. I admit I kind of wished [@justin_shocknet](#) was there to shake things up a little. Oh well.

The time flew by. I couldn't believe how quickly two hours had passed. Everyone was heading downtown to Pubkey for a few drinks, but I was tired and decided to begin my long journey home instead. I had a great time. If you get the chance, make the effort to attend and see for yourself.
