Congratulations to this week's Word-of-
Mouth Wednesday winner, @supratic!
Got some really interesting suggestions for
promoting territories!
Also you should totally check out the
territory explorer (#1015336) supratic built.
Check out the winner here: #1015130

1. Grassroots

adjective
: not adapted from
or added to an
existing facility
or operation
: totally new

noun
: the very foundation
or source

ISSUE #14

Bitcoin in San Diego

3621 sats \ 4 comments \ @SatAttack 21 Jun bitcoin #1011444

Hey stackers.

After seeing @TNStacker post some cool pics from my cool city I'm hoping he/she is still there while I post this so he/she can maybe go spend some sats.

#1009857

#1009034

I'm proud to say the Bitcoin community here is strong. As someone mentioned here: #1009875 we have four strong Bitcoin only meetups. Each of them is generally focused on spreading the good word and teaching others. I've seen cool tutorials for ColdCards, tutorials on how to use BTCPAY, how to use BISQ safely and efficiently, I've seen some mesh networks being experimented with and built in local areas, and more! What I would like to add to all this San Diego discussion though is a few places you can spend sats. We don't have too many places but the ones who do are strong and passionate Bitcoiners.

First is PlanterSam. They have a small and beautiful home plant store, and this power husband and wife combo are experts at keeping your plants alive! They have their own BTCPAY server, on-chain only at this time, but are willing to use their mobile LN wallets if that's what you prefer. The owner expressed difficulties with keeping channels open. He keeps getting forced-closed on unfortunately. I'm no expert but we spoke a bit about his issues, and how I've managed to keep my one private channel with ACINQ open for a couple years with no issues.

Imperial Beach (San Diego)

Perhaps he has this issue worked out and is also accepting lightning payments through his BTCPAY server. Beautiful store, great products, expert advice.

Next is Cafe Di Talya in Pacific beach. If you want to make the stereotypical lightning-for-coffee transaction, I promise this is the place to do it. He's a bit new to Bitcoin but has been set up to accept lightning payments by a friend of his whom I don't know. It's Italian owned and he imports all of his beans and some other products directly from his hometown in Italy and let me tell you, the quality is there! The property is also beautiful with plenty of seating and lots of plants and modern furnishings all over. He's famous for his pistachio latte but with these beans I can't deviate from a strong black cup of coffee, or an espresso.

Lastly, Phileas Foggs. This place is just amazing. It's an English pub with a menu that pulls specialties from a few different parts of the world. The beer list is expansive and mixed with rotating local brews and imports from all over. There were many I had never heard of before. They have all sorts of events, like Monday karaoke, and a friendly community of regulars. None of the regulars I've seen so far are into Bitcoin (yet) but they all accept and encourage the owners Bitcoin pride. And let me tell you, he is PROUD! When you stroll up to this pub the first thing you'll notice is a massive "BITCOIN ACCEPTED HERE" sign right on the front of the building. Best yet, if you pay with bitcoin, you get a 10% discount off your entire bill. Here they are also hosting their own BTCPAY server with on-chain and lightning set up and ready to go. The owner can be found at some of the bitcoin meetups we have here. And this I just love <https://phileasfoggs.com/btc/> They listed a wonderful explanation for why-bitcoin but also took it upon themselves to post links and contact information to all other businesses they know of that are currently accepting bitcoin in the area.

California certainly has its political issues, but here in San Diego you can find a strong bitcoin community that is welcoming, knowledgeable, and friendly. There are a few other places that will take your sats that haven't shown up on BTCMAPS yet. In a farmers' market I found a winery that buys wines from the vineyards of Temecula, ages the wine in whiskey or bourbon and then re-bottles and sells them. There's also <https://perennialpasturesranch.com> I know at one point you could buy an entire cow (or half or quarter) with an on-chain transaction. The owner came and spoke at one of the bitcoin meetups here. I haven't verified any time recently whether bitcoin is still accepted here, but their product is top quality, and I would assume they still accept sats.

STEAKTOSHI

916 sats \ 15 comments \ @jasonb 21 Jun bitcoin #1011638

CHALLENGE

Find all the differences between the two:

Looks like the sat to dollar exchange rate has been pretty stable for the past month. That's neat. But it looks like Steak and Shake has gone from, "Contact us for questions," to "STEAKTOSHI" levels of being down the rabbit hole. Has anyone else noticed this?

Next month, I'm assuming they'll be blasting Eisenhower's military industrial complex speech over the speakers and have quotes by Hayek on the walls.

reoly / 50 sats \ 1 reply \ @kruw 21 Jun

Translation: Stop calling us with questions about Bitcoin.

ANSWER: excluding barcode, there are 10 general differences

Revived ~ai

1119 sats \ 3 comments \ @smoking_snake 22 Jun bitcoin #1012316

~ai defaulted early May 2025 and got archived. This is a pity because it's an active topic of interest that gets lots of discussion, and content doesn't always fit purely in other generic territories like ~tech

"Study Bitcoin. Save your family."

The posters are signed by the profile bitcoin.cabuloso and have been spotted on poles, walls, and bus stops.

This isn't a corporate campaign. It's grassroots revolution. Bitcoin is reaching where the state has failed.

Territory configuration:

For now, I'm going to mirror ~tech in fees: 30 sats post, 1 sat for a comment; my goal is not to make a profit, but to enable discussion and just be an awesome SN sub-community. Break-even would of course be nice, but not a requirement. There shall be no moderation, despite my fear that we'll see relatively more LLM slop in this territory, because I don't aspire to be your overlord. I hope we can just collectively downzap if we as a community feel that particular content is extremely bad quality. If the slop gets too invasive, I'll consider upping the fees to up the barrier.

Thanks @ek for coding and @k00b for deploying the
bugfix to the issue I ran into last week <3

reply \ 100 sats \ 3 replies \ @Cje95 23 Jun
So happy for this! Working in AI policy for Congress I
thought of bringing it back but tbh the cost was out of
reach for me. Can't wait to add posts in the future!

reply \ 100 sats \ 7 replies \ @byzantine 23 Jun
when a territory retires, what happens to all posts in that territory?

↳ 53 sats \ 6 replies \ @optimism OP 23 Jun
All remain there and on revive, they're still there. No resets, just an "ownership" change.

I Deleted My Home Internet

5336 sats \ 16 comments \ @kr 23 Jun tech #1013788

The other day I deleted my home internet.

Mostly as an experiment (every now and then I will delete bank accounts, credit cards, phone numbers, etc... just to see what might happen), but also partly because my internet provider is awful. They offer the kind of service where you lose internet access every month or so, their technicians have to visit you in person to fix problems, you can hardly find their customer support number, and when you do get a hold of them, you get bounced around to a handful of temporary offshore employees reading off scripts for an hour.

And since the two primary telecom providers in my area are basically mirror images of each other (except one has a blue logo and one has a red one), I knew I wouldn't get much better service with the other one.

Initially I was considering downgrading my internet plan, but the clever telecom duopolies have dialed in their pricing so that if you want to save 10% on your internet bill, you need to accept a 10x internet speed reduction. There's really no such thing as a "budget" internet plan... everything is \$70-\$100/month or more.

So I just left entirely. Well, sort of.

I do have a \$20/month phone plan (the cheapest I could find in Canada), which gives me 1GB/month of internet data, so I can still access the internet in a pinch... but 1GB goes by very fast so I keep that mostly for emergencies or when I'm walking around and need directions. It's certainly not enough for me to do work like uploading videos to YouTube.

I also have an "office" of sorts, which does have internet, so I do most of my publishing, emailing, or ChatGPT prompting there.

It's only been about a week so far, but I've already noticed a couple of big changes in my behavior.

First, on the day I deleted my internet, I realized how dependent I was. My TV stopped working, my computer became relatively useless, even my mattress (one of those cooling ones that tracks your body) stopped working.

I also found myself constantly opening up my laptop, refreshing my browser, and hitting the same "No Internet" page. Seriously, I must have tried to use the internet dozens of times that day. I guess it's all a subconscious pattern at this point, but it took a day without internet to really see how important of a role it plays in my life.

A few days in, I mostly stopped trying to use my laptop in the evenings and started reading a lot more instead. I even spent an evening drawing designs for a new idea I had with pen and paper. It's probably been years since I've picked up a pen and paper and focused on one singular task like that.

Because I'm no longer constantly using my laptop, I'm also not spending all my evenings in my office where my laptop is located... it sounds kind of strange but I'm starting to re-discover areas of my home that I rarely use. I'm also spending a bit more time outdoors, but a heat wave this weekend kept me inside.

Finally, the strangest thing I've noticed is how little "news" I get now, and how relaxed I feel in the evenings. I still get to hear the regular gossip and the news about which country is bombing which country at the office, but every day I go to the office with basically no context of what happened in the world since I left the day before.

It's a really cool feeling to not know what's happening thousands of miles away, what the stock market is doing, or what new drama is floating around on the internet, even if just for a few hours at a time. It's really relaxing, and seems to be making my evenings and weekends much more enjoyable. I'm also sleeping better, despite losing access to the "smart bed" that was supposed to perfect my sleep for me.

Top Story

In the past I've tried things like deleting Twitter from my phone, limiting my screen time, etc..., but so far this is the only method I've had much success with. The other ones are too easy to get around. This time I had to physically send my modem in the mail back to my telecom provider, so it's a real pain if I change my mind and want internet again.

Anyways, highly recommend experimenting with this if you're either curious about how your internet usage may be clouding or distracting you from your offline life, or if you're just frustrated with your internet company and don't want to keep paying them for poor service.

We'll see how long this experiment lasts - don't expect timely replies tonight, offline for now!

reply \ 30 sats \ 1 reply \ [@Scoresby](#) 24 Jun

There was a time when I read a lot of news. My kids were really little at this point, so I may have just been trying to entertain myself while dealing with babies. But it certainly wasn't a good use of my time. Then I heard this line by Taleb that you shouldn't bother reading the news because if it's important, you'll hear about it and otherwise it's a waste of time. Really resonated with me, and I've never gone back to reading news.
No internet at home is intriguing.

reply \ 20 sats \ 1 reply \ [@SimpleStacker](#) 23 Jun

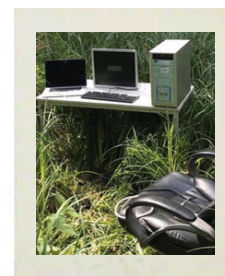

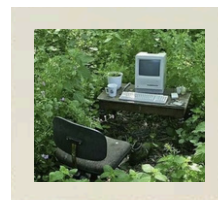

Yo, that's crazy, but kudos to you! Do you think you're gonna stick with it?

30 sats \ 0 replies \ [@kr](#) OP 24 Jun

Yeah I'll try a couple of months and see the effect it's having on my life. I'm cautiously optimistic that this might actually be sustainable.

reply \ 30 sats \ 1 reply \ [@Undisciplined](#) 23 Jun

I'll definitely be interested in your updates. Hilarious that your bed stopped working.

Why Are Bitcoiners Idiots?

11.1k sats \ 68 comments \ @denlillaapan 26 Jun AskSN #1015955

I sometimes wonder if Bitcoiners (same, actually, for libertarians) are more or less stupid than the average person. Often, I conclude more.

It's the misalignment between knowledge of ignorance and pretense of knowledge.

A stupid person who knows that they're stupid don't make outrageous, ridiculous errors. (They also don't advance anything worth listening too, so there's that...) Per Dunning-Kruger type reasons, a stupid person with some newfound knowledge is still stupid but doesn't know it -- so runs around pretending they're not stupid. People who found libertarianism or bitcoin like five minutes ago quickly fall into this camp.

...

So, Stackers, is this just Dunning-Kruger in action, or are Bitcoiners (slightly) more retarded than the average person?

reply \ 1348 sats \ 9 replies \ @ek 26 Jun

This is one of my favorite topics!

I would say that no, Bitcoiners are not significantly more or less able to think critically than the average person. They are just as wrong if you talk to them about enough topics. Sure, there might be a few exceptions, maybe even prominent ones, but on average, "being a Bitcoiner" does not tell me anything about your critical thinking skills. Money is just one topic, and pretending that knowing more about one topic makes you smarter in general—that sounds stupid in a profound way to me.

@030e0dca83 26 Jun

and everyone said, GET OFF X

reply \ 300 sats \ 8 replies \

@Undisciplined 26 Jun

Before I realized it was already a well known thing, something like Dunning-Kruger occurred to me. I thought of it as being iterative, though. As we learn new things, we overestimate ourselves for a bit until we realize that we're still dumb. Then we learn something else and repeat the cycle.

Meme Monday - Best Bitcoin Meme Gets 5,000 CCs
