SQUARE ADVENTURERS: FINALLY SUCCESS BOUGHT SOAP AT A LOCAL SMALL BUSINESS

5656 sats \ 24 comments \
@BlokchainB 7 Jun lightning

After successfully purchasing coffee before Square activated all its POS terminals, I encountered two unsuccessful attempts.

1. Trying to buy coffee
2. Trying to buy meat

Today with SN trucker hat on I went to a local shop that sells all natural body care products.

A few weeks ago I went to this store for an event and noticed they sold naturally made soap so I wanted to go back and pick up some.

I normally get my soap online from Soap Miner and Born Free since both sites take bitcoin but this month i decided not to buy soap from Born Free and to get soap form this local business.

I walk in, I find my soap and it is time to pay. Looking at the payment options sign I noticed its a Square store and Cash App is one of the payment options.

The cashier was on the phone talking to some one in Spanish while she rang me up (so much for customer service!!).

As she showed me the total \$14.85 for two soaps I asked is it okay if I pay in bitcoin. She said Bitcoin? I wish I had some Bitcoin but sorry we don't accept it here!

Normally at this moment I just say "okay" pull out a credit card and pay and move on. But after reading these Square adventures posts I became confident and pushed back. I told her are you sure?

Inspiration: [#1495808](#)

This is a Square terminal they all accept bitcoin. She said okay well I'll let you try to find the option to pay in bitcoin so she showed me the POS.

She then hit the back arrow and looked down the list of options and there it was a line that said pay in bitcoin. She pressed it and boom a QR code showed up that had the Fiat price and the bitcoin price.

I pulled up Alby Go scanned the QR code and it took about 5 seconds to settle. \$23,862 After I paid the cashier goes wow! How do I know she (The Owner) got paid. I told her to look at the terminal and see that it is marked paid. She said okay then I said great! She handed me the soaps and I left.

As I was leaving I was shaming myself for not showing her how to stack bitcoin. But my onboarding game is so weak!

What should I do pitch Strike?! I couldn't even get my barber to download Strike. Fold is too busy as an app to stack bitcoin. I need to think of a way to help people get onboarded quickly so they can stack sats? Stackers if you know drop it in the comments and I'll zap the best method 5k sats!

While like Soap Miner and Born Free those companies are not in my neighborhood. From this day forward I will get all of my soap and pay with bitcoin at this shop.

They have a really nice website that shows all their products. If I get an opportunity I will try to speak to the owner about accepting bitcoin via her online store then hopefully let her know that many bitcoiners out there will buy her products because they can pay in bitcoin!

Note from the Editor

It's summer, and that might mean you're traveling. Right? I know I am. Right now at this moment, in fact. We're all traveling through time and space. And isn't that a trip? So take a break, dust off your boots, and sit back with the stories of this week.

[HM] ADVENTURES OF PLATO: THE WORLD'S FIRST BITCOIN ROAD TRIP

10.5k sats \ 9 comments \ @billytheked
6 Jun the_stacker_muse bitcoin history

He could hardly wait since the idea came to him. He was unable to sleep. The thought had consumed him entirely ever since mpkomara posted bounty to the forum offering 400 coins to anyone willing to live entirely off bitcoin for one month which he cancelled when he decided it was too easy. This struck a chord in PLATO. This haphazard post would change the course of his entire life, sending him barreling down the highway along the Hudson river, down to Florida, crossing over New Orleans, Austin, west thru Salt Lake City, south past San Fran and finally up the coast to all the way to Seattle. Everything conspired to lead him toward the road, every thought, and he could almost hear the radio fuzz as his midnight black firebird edged over mountain peaks to coast down over the foothills into his destination. Mpkomara walked back his bounty, and besides, would not offer it to him unless he purchased his car completely using bitcoins. Whatever....

It was the first epoch, and not long had passed since block 113800 was mined.

Plato looked around him at an empty room. No chairs, no television set, no more silver coins. All his most prized possessions, sold. What did it matter if he had these material possessions, which he couldn't stow away in the trunk of his firebird, anyway? A tent, a sleeping bag, some food and safety supplies, a reliable connection. He had bought an ill-fitting pinstripe suit for when he would need to turn salesman, lecturer, consultant or interviewee of whatever news broadcaster might be interested to cover the momentous event.

Nothing would stop Plato. There were clearly enough forum members interested in the idea of going on the road entirely on bitcoin, and there was even some mention of selling ad-space on the bumper of his car for bitcoin businesses. He pledged to do it, never touching fiat currencies along the way, but it felt as though he had fallen into it, as though it just as easily could have been anyone else. His car would be one exception, which was not entirely paid off, and had a lien denominated in dollars but this he could stomach as long as it served his mission of spreading the Good Word.

Live solely off of bitcoins [Bounty Canceled]
February 15, 2011, 11:28:51 AM

He heard of others working themselves into a fever when they discovered it-- stories circulated of one developer, Gavin Andreson, hospitalizing himself by not eating food but voraciously consuming information and excreting code, another user went blind from overexposure to his computer monitor, which, due to a manufacturing flaw, produced too many lumens and singed out his retinas. Luckily, the he had managed to mine some before then, but no one really know if he managed to sell those, or how he could trust anybody to do it for him. Plato couldn't make very much mining, though he tried, and besides his hankering for adventure made him too impatient. He sold his belongings and watched in his rearview mirror as Hartford shrunk out of sight.

Packing List

Here's my packing list. What am I forgetting?

- Snazzy suit (you're more approachable in a suit)
- 3'x4' whiteboard - for advertising if when I get stranded. I'm thinking 'BUYING GAS, NO \$ \$, ONLY BITCOINS' or maybe a simple 'STRANDED, ASK ME ABOUT BITCOINS'. Got a clever sign idea? Leave a comment.
- A kickass tent
- Sleeping bag
- Cell phone, laptop, Nintendo DS, mp3 player
- Inverter for charging those from my car's 12v socket
- First aid kit
- Car safety kit - maglite, fire extinguisher, flares, reflective triangle
- 5ish gallon jugs of water
- Plenty of trail mix

Bitcoin pitch from therealplato.com blog

"so let's say you want to transact some business with someone in another country and you're probably going to send dollars to them you're probably going to use the internet maybe you'll use Visa maybe you will use PayPal maybe a bank transfer all these are intermediaries and some of them are better than others but they all have their own fees they all have their own restrictions and none of them are really perfect Bitcoin is a way to remove these intermediaries so I can directly send money to you it's it's the people's currency MH and I think I think that in itself is really one of the most important things that you can grasp about Bitcoin"

He didn't 'spend' bitcoin per se, not in the sophisticated sense one might imagine it nowadays, where businesses can spin up Lightning QR codes, and presto, you're only left scratching your head for two or three minutes until the proprietor comes to you to explain that they actually had no idea they even had the option. These were the days of a fledging community. Members of Bitcoin Talk made their locations available on a public Google Map of his planned route. Forum members volunteered their time and space to provide PLATO with lodging, food, and gasoline, all paid for in bitcoins.

It was early April when he began his trip, not long after the first time he posted about it on Bitcoin Talk. He left on April 9th toward Boston then to Schenectady NY. It looks like he was in NYC on April 16 to record the inaugural episode of The Bitcoin Show (Video), and then in Huntsville AL on the 26th to give a talk (part 1 and part 2) on Bitcoin at the University. Toward the end, he mentions he hadn't yet had to set up camp.

Haiku from his blog

Tried to zip zipper
Dark tent, by feel, come on, zip
Oh, two halves, wrong half

A tornado ripped through Alabama while he was passing through, and he mentions on the forum that he spent some time there volunteering to clean up from the damages. Also, he started a disaster relief fund donating proceeds to victims of the disaster. The above forum link mentions a donation address that he set up on mybitcoin.com (<https://web.archive.org/web/20110714142059/https://www.mybitcoin.com/>).

He also mentions this e-wallet service during his interview with Wagner. The latter allegedly lost 25 000 bitcoins when this service was taken down, which he mentions in a video released shortly after the incident. Wagner advocates against reversing the transactions, emphasizes the importance of not leaving funds in in service providers or exchanges, expresses regret for having promoted mybitcoin.com to his friends and family, and reiterates that bitcoin was not hacked but a trusted intermediary went AWOL with people's coins. To my knowledge, there is no record as to whether PLATO lost funds on mybitcoin.com, which happened 27 July that year, at which time when he was nearing the end of his journey.

ABOUT

An intuitive web-interface for Bitcoin

SIGN UP

MyBitcoin sports an easy to use interface with large navigation buttons. It is suitable for those who are just trying Bitcoin out, or for those who want to use Bitcoin for commerce now, and without delay.

SIGN IN

CONTACT

No software to download, install, or configure

Downloading and installing the Bitcoin software isn't a requirement to trade with MyBitcoin. Of course, you can still use the Bitcoin software in conjunction with MyBitcoin. The choice is entirely yours!

Shopping Cart Interface (SCI) and HTML button code generator

Just like many other popular payment systems; you can easily generate and paste HTML code onto your website to accept Bitcoin payments! No more messy programming, or other headaches. You'll have your website accepting Bitcoin in minutes!

On-the-fly national currency comparison

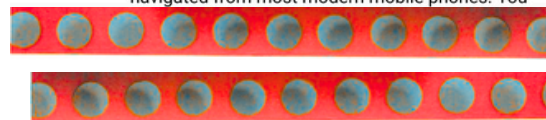

Price the goods and services on your website in any national currency, and have our SCI convert the prices into Bitcoins as each purchase is made.

Payment forwarding

You can have every single incoming payment forward to another Bitcoin address. Great for those who want to keep their coins on their desktop PC, or all in one place, but still want to use our shopping cart interface and merchant tools.

Compatible with most modern mobile phones

MyBitcoin's simplistic web-interface can be easily navigated from most modern mobile phones. You

From then on, there are a bunch of shitcoining posts from his account on Bitcoin Talk, although it would seem that his account got hacked.

"All posts by me after 2012 were a compromised account. Probably by 'BBOD The Best Futures Exchange'. SORRY Y'ALL"

Whatever happened, if he was using BBOD, it seems he did fall to the allure of the shitcoining siren song.

Where is PLATO? Did he settle down in Portland or continue his adventure? What happened to the firebird?

I like to think he got out with a good chunk of change and found a way to continue his evangelism, continuing to attend meetups. He was passionate about making Webs of Trust, which, I believe, was his main motivation for the road trip. I do think he touched the shitcoining stove, but I have no idea how badly he got burned.

Archive link to therealplato.com

June 13th he posted that he was in LA and then the details of his trip start to become sparse. Pete Rizzo shared a video of him visiting Casascius, who buys him gas, and then it seems they go into his house to check out his mining rigs and they even hit a block, which gets donated to the trip. He says he is still in SLC at the time, where he did a radio interview (?). From then until the end of August, he becomes less active sharing the status of his journey on the forum. His last post on the journey is about how he wants to begin living off of bitcoin exclusively, suggesting he must not have lost all of his coins during MyBitcoin.com debacle.

The last post from his blog:

"I was gonna keep travelling up to Washington and Vancouver, CA but I'm strongly tempted to stay here. This is apparently a common temptation, and the reason behind the impressive unemployment levels and homelessness in Portland. I've been starting to look for housing (preferably to be paid in bitcoins) and a job (preferably an engineering job in the solar sector.) If you happen to have leads on either of those, drop me an email - plato@subvert.me"

XYZVAULT - "WE CAN'T SEE YOUR DATA" VS "WE WON'T LOOK" WHICH ONE MATTERS TO YOU?

23.8k sats \ 13 comments \ [@xyzvault](#) 8 Jun bitcoin

Collaborative Custody. Secure by Design. Zero Knowledge.

Quick analogy first. Imagine two filing cabinets at a Bitcoin custody service:

Cabinet A (plaintext) — full of regular paper. The company has a key. Anyone with the key can read every file. The company promises they won't, but the data is right there to be read.

Cabinet B (ciphertext) — full of paper, but every word on every page is encrypted with a key that lives only on YOUR phone or laptop. The company doesn't have your key. If they're hacked, served a subpoena, or have a rogue employee — they hand over locked gibberish, because that's all they have.

Most Bitcoin custody services run on Cabinet A. They tell you they don't look. We can't tell you that, because we can't look in the first place. Different promise. Different math.

That's the whole point of what I'm building. A 2-of-3 multisig Bitcoin vault where:

- Encryption happens on your browser. Your passphrase derives a key that never leaves your browser. Our server only ever stores ciphertext — vault names, device information, the wallet configuration file, everything. We can't decrypt any of it.
- We don't store your addresses, balances, or transaction history. Your browser derives addresses locally and queries our blind proxy to a private Bitcoin node. The proxy relays information without linking addresses to users.
- We hold 1 of 3 keys. You hold the other two on hardware wallets. We can never move your funds alone. If we vanish tomorrow, you sweep your Bitcoin into Sparrow Wallet with your two keys.
- Your spending rules live in encrypted form too. Address allowlists, daily limits, hold timers — enforced inside a secure enclave, never readable by us, only changeable with a hardware-wallet signature.

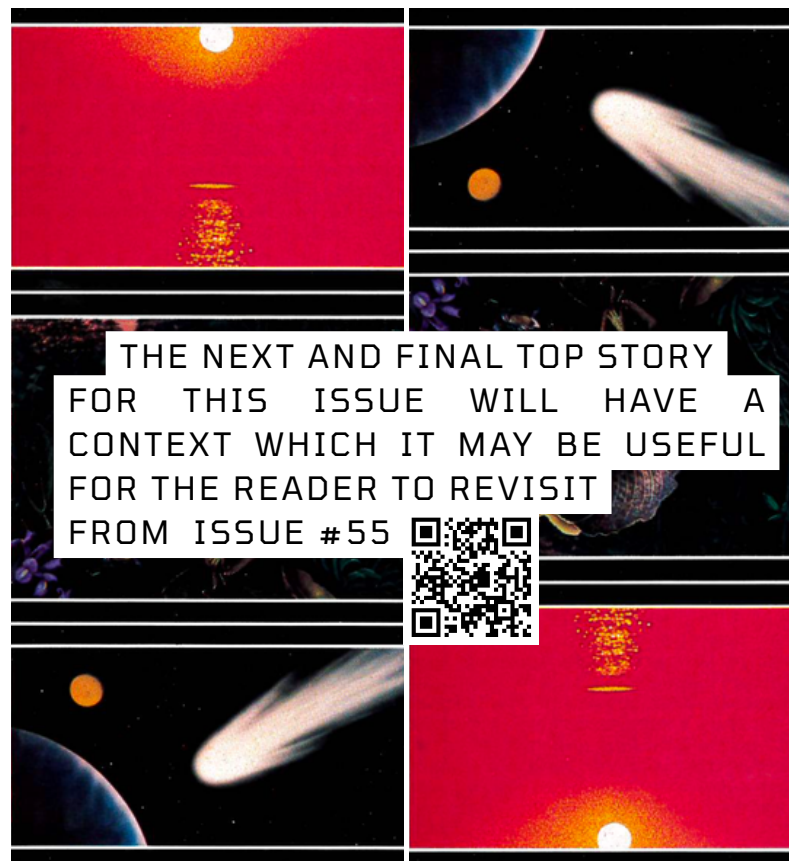

The litmus test for any multisig vault service: can they tell you their total assets under custody? If yes, they can read every customer's balance. If they charge you a percentage of what you hold, same thing. Both require plaintext. We can't produce that number — we genuinely don't know how much Bitcoin our users hold. That's not a marketing line.

One question for anyone using multisig today:

1. Would this matter to you? Or is "they promise not to look" already enough?

Check us out at <https://xyzvault.io> — would love feedback from anyone using another multisig platform, or who'd considered it and backed away.

< Stacker News users are an exceptionally thoughtful bunch of shitposters. Discussion on this post exemplifies this point. I recommend reading the questions and answers found here for the curious-minded >

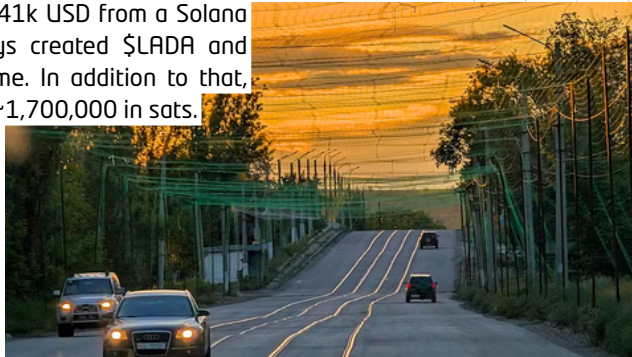

TOYOTA HILUX TRUCK DELIVERY TO KRAMATORSK, UKRAINE (PART 1)

112k sats \ 14 comments \ [@petertodd](#)
11 Jun Travel bitcoin

I quite unexpectedly got ~\$41k USD from a Solana memecoin, when some guys created \$LADA and forwarded the rewards to me. In addition to that, since my last delivery, I got ~1,700,000 in sats.

So using 3,885.45€ of the \$LADA funds I completed the Rainbow Battalion fundraiser on [@carforukraine](#) to get an up-armored Toyota Hilux for Flash Battalion. Delivered with style!

Car for Ukraine is a huge operation that has delivered over 900 vehicles worth over 8 million € in total. This was my first time working with them, and I'm really happy with how easy and professional it was. Importantly, this truck had an armor package, with about 250kg of steel plates added to protect the soldiers in the vehicle, and critical parts of the vehicle such as the radiator. I suspect if the L200 I previously delivered had this armor package, the FPV hit wouldn't have disabled it at all.

I picked up the truck in Lviv; mine was one of a group of half dozen vehicles getting delivered at once. Mostly Toyota Hilux's or Mitsubishi L200's. But not all:

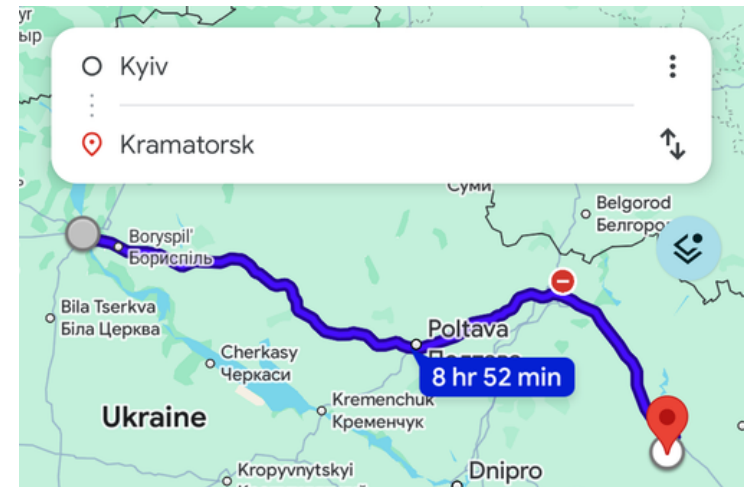

While picking it up I also checked with the unit to see what else they needed.

I drove the ~7 hours to Kyiv that evening, picking up an ecoflow and a cheap fridge along the way. I told the salesman I was taking the fridge to a military unit in Kramatorsk. Turned out he had a brother serving in that area. He couldn't help with the ecoflow. But he was able to use his employee discount to get me another 5% off the fridge!

The next day there was some debate on whether or not I should drive directly to Kramatorsk. The problem was timing:

Including breaks and the difficulties of navigating by myself without GPS during air raids, I was realistically looking at 11 to 12 hours. Even if I left at 9am, that might have me arriving in Kramatorsk after sunset. It's safer to drive on roads at risk of drone attacks during the day.

1. There's (hopefully) more people around, who are higher priority targets than you.
2. Thermal cameras don't work well during the day; on thermals vehicles show up very clearly.

So as I was traveling alone, we decided it'd be best for me to spend the night in Kharkiv and do the final leg to Kramatorsk the next morning. That gave me plenty of time to do the drive, and pick up the second ecoflow. I even had time to try to get a good photo of the truck with a rainbow, for the Rainbow Battalion guys:

(don't ask me how many photos I took trying to get that to work... should have just used photoshop)

Kharkiv to Kramatorsk is 2.5 hours on Google Maps by the direct route. Actually a little longer, as we'll see later:

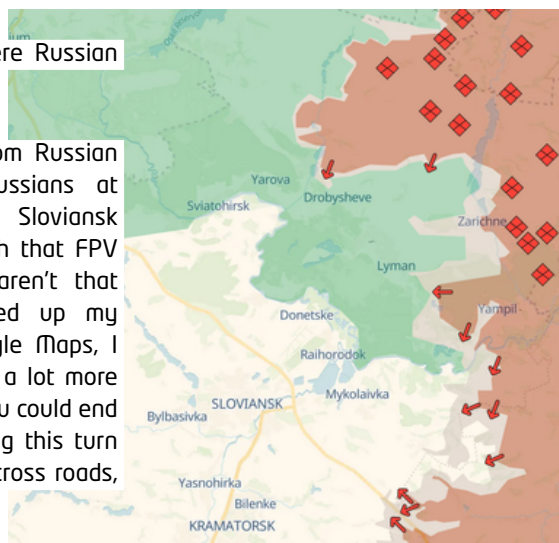

Between Kharkiv and Izyum, the road is pretty safe and uneventful. Though that morning there were constant air raids, and hence GPS jamming, so I had to stop a few times to figure out where I actually was. There is some recently installed drone netting around Chuhuiv. But my understanding is that's been installed in anticipation of a future threat; not because there is a significant threat right now. Izyum itself is actually doing relatively well: there's an important bridge on that route that got destroyed in 2022. I noticed on this trip that they've almost fully repaired and reopened it, in the middle of the war!

Just before you leave Izyum is the last gas station. That's where I put on my vest, and a bit later, my helmet.

Why the body armor?

Let's look at the map of where Russian forces were the day I drove in:

At the closest I was about 20km from Russian forces, a direct line from the Russians at Drobyshche to the main Izyum to Sloviansk highway (yellow). That's close enough that FPV drones are a danger. But attacks aren't that common. However if I had screwed up my navigation and blindly followed Google Maps, I would have been as close as 15km - a lot more dangerous. Or if you really mess up, you could end up driving right into Russians... Making this turn into Sloviansk early, before the main cross roads, is important...

For the previous L200 delivery we decided to meet at a bombed out hotel. I didn't like the optics of that - I wanted to try to get a more hopeful shot in a nicer part of Kramatorsk. Also, the soldiers I was going to meet didn't think that location was really all that safe anymore as Russia has been targeting that part of Kramatorsk repeatedly with glide bombs. So we decided to do the actual handover near the main park, famous for it's gigantic Ukrainian flag. Of course, we filmed some handover footage:

< as this post includes multiple brief videos, visit the post online for playback >

In Part 2 I'm going to cover what I did in Kramatorsk, the two nights I stayed there, and the current state of the city and the surrounding area. Russia is really pouring resources into trying to destroy the city; it's noticeably more dangerous than last time I was there, with fiber FPV drones now flying over part of the city.

Thanks goes to the \$LADA community for making this possible, as well as the Bitcoin donors. Though I gotta say, the Bitcoin donors are falling behind the Solana community. 😊

Wait a minute, I thought Hilux was an old 90's truck. That one looks newer. I can't find any for sale that look like that in the US. Now I'm curious aaaa

↳ 206 sats \ 0 replies \ **@petertodd OP** 11 Jun

Look closely: it's actually a right hand drive truck from the UK! IIRC they said it was a 2009 model. They're still sold too. But not in the North American market IIRC.

33 sats \ 1 reply \ **@Scoresby** 11 Jun

I like that you put the fridge in the truck.

↳ 135 sats \ 0 replies \ **@petertodd OP** 11 Jun
I liked that it actually fit...

21 sats \ 0 replies \ **@denlillaapan** 11 Jun

Go Solana!! An actual use case, amazing

132 sats \ 0 replies \ **@petertodd OP** 11 Jun freebie

The situation in Kramatorsk is getting harder. But Ukraine is making amazing progress in building their own weapons, even cruise missiles; the FP-5 has a ~1000kg explosive payload. Ukraine just needs to hold on to places like Kramatorsk long enough to crush Russia economically and strategically. If anything, Russia's increasingly desperate attempts at terrorizing civilians is a good sign that Russia is losing; I'll talk about this more in Part 2 of the above article.
