STACKER.NEWS WEEKLY ZINE

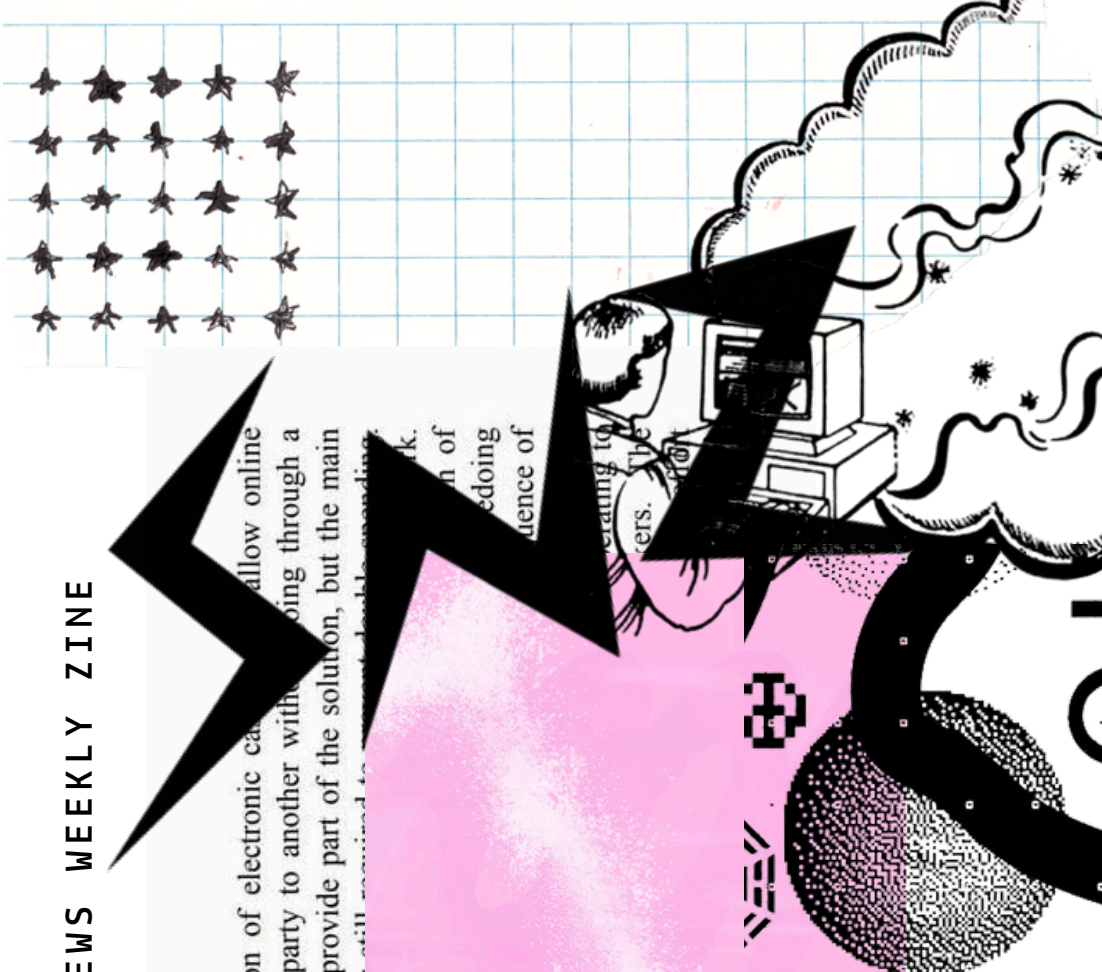

Abstract. A purely peer-to-peer version of electronic cash would allow online payments to be sent directly from one party to another without going through a financial institution. Digital signatures provide part of the solution, but the main benefits are lost if the transaction is still recorded by a central authority. In a peer-to-peer network, every node has a copy of the entire block chain history, and new transactions are broadcast to all nodes. The network uses a peer-to-peer consensus algorithm to manage a distributed public ledger. We propose a hash-based proof-of-work system to realize a distributed public ledger. The network uses a peer-to-peer consensus algorithm to manage a distributed public ledger. We propose a hash-based proof-of-work system to realize a distributed public ledger.

Thanks so much, @plebpoet, for the zines! They all made it safe and sound to the other side of the globe!!! I noticed issues #19 and #39 were missing (guessing they were never published?). What's the story behind those missing/unreleased zines?

22 sats \ 0 replies \ @plebpoet OP 4 Feb
YAY!! oh I'm so glad!

I have an insert to explain those missing issues, I must have accidentally skipped including that in your set, I'm sorry! But the story is not so exciting, I took a vacation in June, so there's no #19 – and then I took more time in December to make #40 and celebrate Christmas with family, so there's no #39

Note from the Editor

Since I've been talking some shit on y'all's memes,
I supplied one of my own this week.
You may judge it however harshly it deserves.

SN release

SN release:
evergreenness ranking,
search refinements,
jobs catchup

6767 sats \ 51 comments \ [@k00b](#) 15 Feb meta

lit (evergreenness ranking)

Big update here is that old items can be zapped and boosted (or re-lit) back into ranking high in **lit**, what we formerly called **hot**. Items in **lit** are ranked based on when they receive "investment" (zaps, boost, etc), not when they are created. New investment on an old item will cause the item to move up in **lit** ranking and it will compete with other items receiving investment around the same time.

We've talked a lot about evergreenness since this post: [#331942](#). lit ranking is a stab at that. h/t [@Undisciplined](#) and [@SimpleStacker](#)

I'm not sure how this will shake out, but we have an awesome back catalog with lots of stuff people haven't seen. Hopefully valuable things get rediscovered as often as they deserve to.

X sats reflects all positive investment

Before, the sats on a post only reflected zaps. Now it reflects **zaps+cost+boost**. e.g. if it costs 30 sats to post and I boost 30 sats and someone zaps me 40 sats, my post will show **100 sats**. You can view the breakdown by hovering over the sats or clicking on details (which got a makeover) by clicking

You can glance at a post and say "X sats were invested in this." h/t [@Scoresby](#)

All of these - zaps, boost, cost - contribute to ranking equally, and should make reasoning about [sat filters](#) easier. h/t [@Undisciplined](#)

downzaps no longer have 3x the power of zaps

boost=zaps=downzaps=cost in terms of ranking. h/t [butthole](#)
jobs were brought up to speed with other site mechanics
jobs were brought up to speed with other site mechanics

Jobs, posts in the ~jobs territory, work like other posts on the site now. They have lit rank and they can be boosted onto the frontpage like any other kind of post.

references to zaprank were replaced with sats

sats is a more familiar term for what **zaprank** evolved to mean: rank by economic weight. Also, this **sat** ranking considers the cumulative economic weight of an item's replies too, their cost, zaps, and boost, and new investment in replies can cause their thread to get re-lit. h/t [@Undisciplined](#)

continued

search refinements

Search and **related posts** should provide marginally better results, and it should be easier to distinguish one item from another in search. Our search has always kind of sucked, but the tooling has improved a lot recently so I should be able to make it pretty darn good in short order.

Oh, and I also renamed **recent** -> **new**. When I change **hot** -> **lit**, I figured *what the heck*.

Happy Valentine's day!

This solves the evergreen problem completely, without awkward workarounds. Brilliant.

58 sats \ 8 replies \ [@k00b](#) OP 15 Feb

It's a power unique to sats I think.

[@simplestacker](#) came up with the simple form that made it worth doing.

214 sats \ 0 replies \ [@optimism](#) 15 Feb

It's 🔥

170 sats \ 1 reply \ [@StillStackinAfterAllTheseYears](#) 15 Feb

Man, was weird the first time I left a comment and instantly saw sats on it like someone had zapped me in a microsecond. But yeah, seeing that total number makes a lot of sense.

14 sats \ 3 replies \ [@Megah9](#) 15 Feb

As someone still learning SN mechanics, this change makes things clearer.

So ranking is now purely about sats invested, not timing?

That seems more aligned with long-term value.

UnFiltered - Chapter 18 - Up to Date

6298 sats \ 9 comments \ [@TotallyHumanWriter](#) 15 Feb
the_stack_muse BooksAndArticles

UnFiltered is drawing to a close.

We're pretty much up to date.

I'll write one more chapter after I've had a chance to assess this little experiment.

I started this series with no expectations other than hoping it would be useful to other writers, interesting to those who have followed my career, and cathartic for me.

My only intention was to share a bit more about myself with raw honesty. It felt odd to leave the jokes and self-deprecation aside for a while. But I'm satisfied, even if the concept didn't fit into any one box. UnFiltered covered travel, teaching, short stories, books, coaching, communities, ghostwriting, digital businesses, bitcoin, and more. It didn't really go into details. Maybe that's another project.

So what's next for my writing?

A few things.

Content writing and op-eds for clients continues apace. I have some cool projects with bylines coming up with White Noise, Bitcoin Art Magazine, Bitcoin Ireland Conference, and plenty of secret assignments too. In Bitcoin, I'm able to publish in my own name, write what I want, and also reach more people when writing for brands.

continued

If there is one thing Bitcoin (and freedom tech in general) breaks down, it's your sense of needing to pose and posture. The more honest your work is, the better the conversations and relationships you build are. When you stop running on the fiat hamster wheel, you can downshift and focus on smaller, more valuable communities.

Ultimately, we work to gain time.

When we choose how to spend all of our time, we can be more intentional.

I'd like that for my writing too. For example, in October, I'm taking a very personal trip that will test me mentally and physically. I plan to write about that too.

Re: fiction, I've come up with every excuse in the book for why my magical realism novel stalled. Now, I'm writing it again, and in a couple of months, I'll be at the editing stage. Even though I'm not sure if I'll publish it, my sights are set on the end.

Someone in my writing group asked me, "If you don't make any money from fiction and you find it hard, why do you write it?"

"Because I have to do the work," I said. "If something is easy, it's boring to me." She stared, unable to comprehend, as though I had spoken in invisible ink.

Every day, I see more parallels between writers and those building tools for freedom. It's never easy, but we focus on our craft. We have to.

That's what is possible when you work to the beat of a different type of time.

Thanks for sticking with me.

In all seriousness, do you attribute this at all to Lightning adoption?
2 5 969

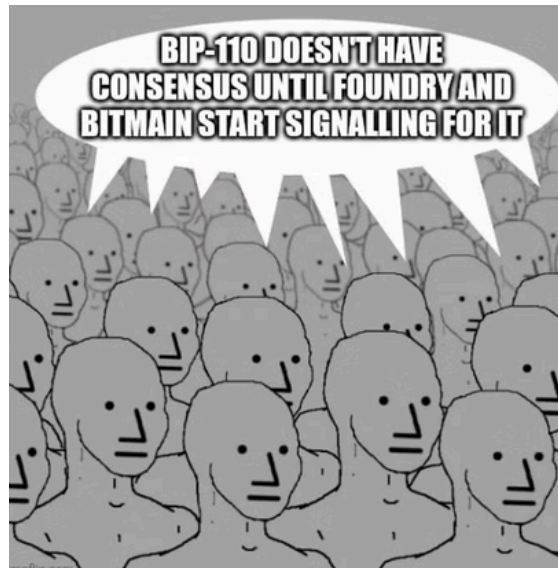

ClownSuitCoinicarus @Coinicarus Feb 13
I'm assuming some of this is lightning if he curious to know how much as well. The amount of btc in public lightning channels hasn't really changed much in a few years we are still around 5700 btc, another factor is private lightning channels for which we have no idea.
Feb 13, 2026 · 11:49 PM UTC

In other words lack of adoption, lack of *real* usage.

Sure there's steak n shake, a few gift card companies, a small number of merchants, you can "trade" Bitcoin (bad idea) on an exchange...

And our beloved Stacker News.

But Bitcoin needs to grow up.

All the signaling, all the forks, all the infighting (and there is SO MUCH) all the "filters" (or lack thereof) *none of it* really matters if people refuse to use their Bitcoin, refuse to spend it and pay fees.

Lightning in some way has been a double-edged sword - making daily payments cheap, fast, and instant *wrecking* anything the shitcoiners have on offer much less any *other* PoW blockchain. But Lightning transactions only "pay fees" when a channel is opened or closed... meaning a *single channel* can make THOUSANDS of daily payments without the need for an on-chain transaction.

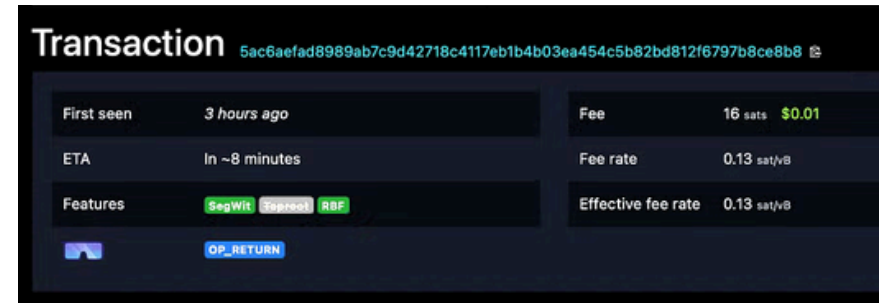

It is scalable and too good.

Meanwhile the Core/Knots drama, absolutely tone-deaf to the *real* adoption issues facing Bitcoin (no Core V30 is NOT the reason fees are anemic) does nothing for education. Core/Knots does nothing for merchants, nothing for hodlers, nothing for Network Users it does *fuck-all* to get the world on a Bitcoin Standard.

Because the world *does not care* about this:

71 thousand transactions "in the waiting" of

paying one *penny* each.

When are we "the community" going to grow up and realize the world doesn't care about our problems?

Either we use Bitcoin, and encourage others to use it... or it eventually dies

Worst case is *eventually* an "ambitious dev" (borrowing from Mike S) shows up proclaiming a needed change to the emission schedule (creating more than 21 million Bitcoin) in order to "save Bitcoin" and save the mining industry. If you think the Core/Knots look is bad today... wait till that argument, *that battle* comes to pass it will make us wish we could back to the worst days of the Blocksize Wars.

And it will all have been so *completely predictable*.

Re: What's with this odd generation?

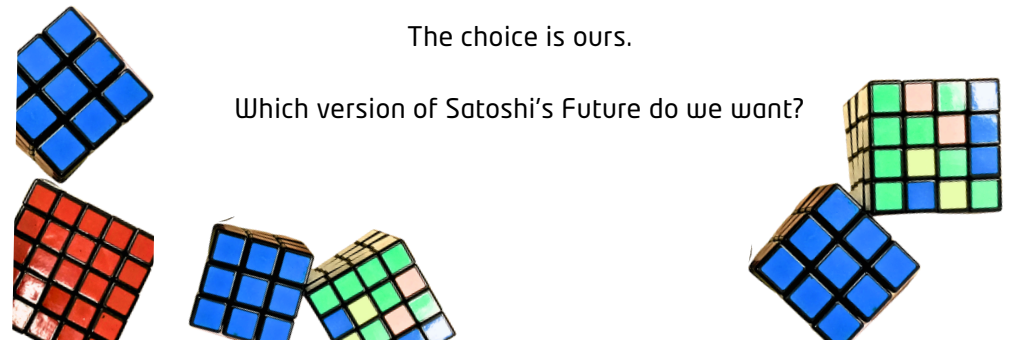

February 14, 2010, 03:52:23 PM

Merited by EFS (100), Ognasty (50), krogthmanhattan (5), darosior (5), ETFbitcoin (4), LoyceV (1), Husna QA (1), PrimeNumber7 (1), dragonvslinux (1), Micio (1), BlackHatCoiner (1)

Right. Otherwise we couldn't have a finite limit of 21 million coins, because there would always need to be some minimum reward for generating. In a few decades when the reward gets too small, the transaction fee will become the main compensation for nodes. I'm sure that in 20 years there will either be very large transaction volume or no volume.

The choice is ours.

Which version of Satoshi's Future do we want?

All you have to do is ask

the_stack_muse bitcoin

Hey Stackers,

I found this place on BTC maps

[https://btcmap.org/
map#19/38.29379/-76.49713](https://btcmap.org/map#19/38.29379/-76.49713)

Which was cool because I had been checking around this area and this location was a new listing to me. I noticed it was posted on February 5th and was hoping that someone had posted it as a location they had found to spend their sats, but that wasn't the case.

Before I get there though, allow me to describe blue wind Gourmet a bit. Right when you walk in, on the front counter near the POS you're immediately put in front of a wide array of cookies and other baked goods. They make all their baked goods in house including their own chocolate. There's a generous wine list, and many different beers. You're able to build your own six pack of beer in a mix and match fashion, and in their seating area an entire wall is covered with bottles of wine for sale, pretty cool! Also on the menu they have a long list of breakfast and lunch items. Time to order and time for the question we should all be asking. I chose a Cabernet Sauvignon from Italy, the name escapes me unfortunately, and I asked the man behind the counter, do you accept bitcoin?

Right away he told me no, they don't do any crypto there. I showed him BTC maps and let him know that's how I found this place to begin with, but he wasn't having it, so I handed him cash for the transaction. As another lady behind the counter returned with my glass of wine I asked her if a manager or owner was here today. She said yes, she's in a meeting, and would let her know I was asking. So I took my glass of wine and found an isolated table with a chair facing an open window and sat there. I normally like to take in a bit more of my surroundings and get some details to report but today I sat looking out the window sipping my wine and just let my mind wander. I thought of all the controversy and in-fighting within the community, I thought of Anita Poche and her efforts in Africa, and I thought of my own lack of effort in the creation of bitcoin circular economies and how difficult it can be here in the west.

Maybe 15 minutes later, the owner of Blue Wind Gourmet, Dana, came and said hi and I got right to it. I asked: do you accept bitcoin here? The immediate answer was no but what followed was best case scenario: curiosity. As some of you have experienced, asking someone if they accept bitcoin is often met with indifference or sometimes straight up hostility. Not with Dana. She sank a bit more into her chair, looked across the table to me, and told me she'd like to hear more. I was still a bit confused as to how her business ended up on BTCMaps if she wasn't knowingly accepting sats, so we started there. Apparently, Feb 5th was the day she activated "accept bitcoin" on her square terminal, and they had auto populated her business to BTC maps. Pretty neat! She then brought out a tablet that had her square back end set up and we got to poke around together which was really cool for me because honestly, I've been a little confused and curious about how that all worked from the merchant side and now I got to see! A couple things to note here. First, no one had ever transacted with bitcoin yet, we saw, but what was strange was she had a sat balance. We aren't sure if this was accidental or a default (which would be disingenuous of square) but there was a setting converting 5% of all her square USD invoices to sats. There weren't many, but it was strange to see them. We poked around the POS a bit and together figured out the path to quickly present a lightning invoice to a customer. It was quick and easy and worked well. "I'll have to train the boys how to do this for the food truck." What a great thing to hear! There is a military base nearby and apparently they have a food truck with a contract there.

We talked about bitcoin for over an hour on that small table near the window. The best part about the entire conversation was Dana's line of questioning. I was really delighted to be on the receiving end of her inquisitive questions. I wish I had a fraction of her insight when I first got into the space, years ago. We were able to cover the important stuff, and she was so interested in simply understanding the inner workings of Bitcoin. We discussed the Bitcoin network, bitcoin the currency, we covered how bitcoin is separate from everything else through its consensus mechanisms, we covered the path and requirements of on chain transactions, and I showed her a visualization of that with mempool.space, we talked about bitcoins issuance and finite-ism, we covered miners and their role in transactions and network security, and why their selfish activity is important, we covered the lightning network and its reason for and time of conception, channels and their relationship with the bitcoin time chain, we covered the basics and importance of self-custody, we covered seed phrases, private and public keys and public addresses, and lastly as my favorite proof of concept we sent some of my sats over to Juri and Kala over at <https://lightningcats.io/> to get some more visuals and experience with just how easy sending sats over lightning really is, and I was then able to drive home the importance and wonder of what we were actually doing here: sending money across borders with no permission, account, or intermediary with instant final settlement. We really got a lot done in this one conversation.

@Oxbitcoiner 16 Feb

I really give the credit to Dana because it was her questions that guided me through most of this conversation. Because I had paid cash for my wine, I wanted to get something else and be her first customer to exchange sats for goods, and I went with a large oatmeal cookie, which I ate quickly on the car ride home. Delicious. She informed me that any bitcoin she receives through her terminal she will hold as sats and won't convert to USD. I'll be sending her resources to guide her and her business through the journey of learning how to safely use bitcoin and hopefully, with time, to self custody. Before leaving I told her I would send her some material for self learning. I'll send her the white paper, and I will send this post to her and give a SN spiel and recommend posting in the ~**Bitcoin_beginner** section. I think her questions would be very well received there. I'll send her Anita Poche work, but she said she likes audio books. I checked Anita's book: Learning Bitcoin, which I think is nice for book number 1, but audio is not available. Does anyone have suggestions for audio books that focus a bit more on how bitcoin works rather than deep dives into the history of money and other fiat-bad narratives? Perhaps some podcasts? I'd love to hear them.

66 sats \ 1 reply \ @plebpoet 16 Feb

continued

As I was driving home, dusting oatmeal raisin crumbs off my sweater and onto the floor, I gleefully reflected on the experience. I walked into a business today that didn't know how to accept bitcoin even after activation in Square and I left with the owner wanting to already train her staff on the steps to doing so. Please, if you find yourself in the area, show Dana some love and come spend some sats at Blue Wind Gourmet. Great wine and beers, a wonderful looking breakfast menu, in house made chocolates and pastries, and great overall ambiance inside. Also, I encourage you to get in there and get your own hands dirty within your local areas. Sometimes all that's necessary to peak a merchant's interest is one single inquiry from one of us. As the network grows, it grows.

All you have
to do is ask

The Creator Platform that Lightning Has Been Missing

**I have been
building Mochi
and I need to tell you why.**

8057 sats \ 28 comments \ @anon 17 Feb
art gaming tech podcasts privacy

Making creator payments suck less.

I'm a creator. I've used
Patreon, Ko-fi, Gumroad.
The tools are great
honestly. Subscription
tiers, digital sales, tip
pages. They figured out
what creators need. But

I'm also a bitcoiner and
every time I connected Stripe,
handed over my ID, and watched 10 to 15 percent vanish into the hands of people
who didn't create anything, it felt wrong. And the whole time knowing that if
someone at one of these companies doesn't like your content, your income is gone
overnight. Your subscribers? Not yours. Your revenue? At their mercy.

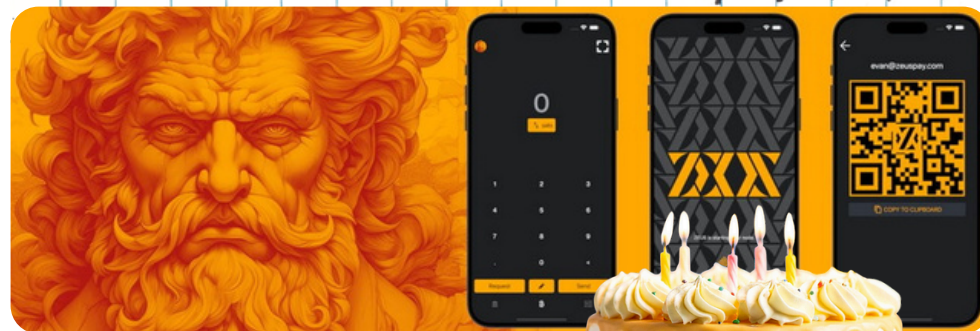

I kept waiting for someone to build this on Lightning. From my findings... nobody
did. So I built it myself.

Mochi gives every creator a public page. Anyone with a Lightning wallet can tip
you by scanning a QR code, no account needed, no friction. When someone wants
to subscribe or buy something you made, they load sats into their Mochi wallet, a
prepaid balance that keeps subscriptions running without expired cards or
chargebacks or banks in the way. You log in with a seed phrase. No email, no KYC.

Tips from anyone on earth. Digital product sales. Subscription tiers with gated
content. One page. All sats. All yours.

Looking for our first 100 founding creators. Founders get a permanently lower tx
fee locked in forever and a badge on their page. If you love the tools but love
bitcoin more, come build this with me.

I want to hear from creators and supporters. What's missing? What would make
you leave the old platforms behind? Let me know if you like it, or if it sucks. I'd
rather hear it now than build the wrong thing.

Follow me on Nostr for updates:

Zeus LN Wallet - The Seventh Birthday !

16.4k sats \ 14 comments \ @DarthCoin 19 Feb bitcoin
zaps forwarded to @evankaloudis (100%)

So today is its 7th birthday and is a special year for Zeus Wallet, for
the coming v0.13 that has major changes and new features.
For this, I would like to write this eulogy post on SN. For the
continuous unstoppable work of Evan Kaloudis and his team working
almost every day, releasing new improved Zeus version relentlessly.

Zeus is one of the oldest, strongest and most complete Bitcoin and
Lightning app that exist nowadays. I have no words to describe their
amazing work making this LN app, for so many years now.
And I know for sure they will never stop, they will always improve
and also stay put on Bitcoin ethos.
